#### **FHIR Resources**

# Lifecycle Event Instances

- All Record Lifecycle Events have 1...1 FHIR SecurityEvent Resource.
- Some Record Lifecycle Events have 1...1 FHIR Provenance Resource.
- Some Record Lifecycle Events have 1...\* other associated Resources.
- In a Record Lifecycle Event instance, related Resources may be indivisibly and immutably bound by 1...\* digital signatures.

#### From ISO/HL7 10781 EHR-S FM – Sample Conformance Criteria

# 1 – Originate/Retain Record Entry

- 1. The system SHALL provide the ability to capture (originate) a Record Entry instance corresponding to an Action instance and context.
- The system SHALL capture a unique instance identifier for each Record Entry.
- The system SHALL capture the signature event (e.g., digital signature) of the origination entry Author, binding signature to Record Entry content.
- **4.** The system SHALL provide the ability to capture both structured and unstructured content in Record Entries.
- 5. The system SHALL provide the ability to capture Record Entries from information recorded during system downtime.
- The system SHOULD provide the ability to integrate Record Entries from Information recorded during system downtime.
- The system SHALL provide the ability to capture date/time an Action was taken or data was collected if different than date/time of the Record Entry.
- 8. The system SHOULD capture metadata that identifies the source of non-originated Record Entry (e.g., templated, copied, duplicated, or boilerplate information).
- 9. The system MAY provide the ability to tag unstructured Record Entry content to organize it according to need, for example, in a time-related fashion or by application-specific groups (such as photographs, handwritten notes, or auditory sounds), or by order of relative importance.
- 10. The system MAY capture and maintain a Record Entry encoded as a standards-based data object (e.g., HL7 Continuity of Care, other HL7 CDA R2 Document, ISO 13606 artifact).
- 11. The system MAY capture and maintain a standards-based data object to mirror (be duplicate and synchronous with) internal Record Entry representation.

# ↑ At Lifecycle Event Occurrence With Event Evidence→

- 1. The system SHALL audit each occurrence when a Record Entry is originated and retained.
- 2. The system SHALL capture identity of the organization where Record Entry content is originated.
- The system SHALL capture identity of the patient who is subject of Record Entry content.
- **4.** The system SHALL capture identity of the individual(s) who performed the Action documented in Record Entry content.
- The system SHALL capture identity of the user who entered/authored Record Entry content.
- **6.** The system SHALL capture identity of the system application which originated Record Entry content.
- IF the source of Record Entry content is a device THEN the system SHALL capture identity of the device.
- The system SHALL capture the Action as evidenced by Record Entry content.
- **9.** The system SHALL capture the type of Record Event trigger (i.e., originate/retain).
- **10.** The system SHALL capture date and time of Action occurrence as evidenced by Record Entry content.
- **11.** The system SHALL capture date and time Record Entry content is originated.
- **12.** The system MAY capture the duration of the Action evidenced by Record Entry content.
- **13.** The system MAY capture the physical location of the Action evidenced by Record Entry content.
- **14.** The system SHOULD capture identity of the location (i.e., network address) where Record Entry content is originated.
- **15.** The system MAY capture the rationale for the Action evidenced by Record Entry content.
- 16. The system MAY capture the rationale for originating Record Entry content.
- IF Record Entry content includes templates (boilerplate information) or copied (duplicated) information THEN the system SHOULD capture the source of such content.

## EHR-S FM Record Infrastructure (RI) – Lifecycle Events

# Common Metadata

	Action	Corresponding Record Entry(ies)
	Patient, Subject of Action or Entry	User/Author Source of Entry
Who	Practitioner, Performer of Action	System/Davide Source of Entry
	Organization of Action	System/Device Source of Entry
What	Action Taken	Record Lifecycle Event
When	Date/Time/Duration of Action Occurrence	Date/Time of Entry Occurrence
Where	Location of Action Taken	Device ID, Network Address of Entry Occurrence
Why	Rationale, Purpose for Action Taken	Rationale, Purpose of Entry

## EHR-S FM Record Infrastructure (RI) – Lifecycle Events

# **Additional Metadata**

	Action	Corresponding Record Entry(ies)
		Data, Document or Artifact ID
	N/A	Amendment/Translation Sequence
		Pointer to Pre-Event Entry: e.g., pre-amendment, pre-translation
And		Event flagged as (known to be) Disclosure
		Permissions associated with Entry Content
		Entries in Event Transaction: e.g., set of entries viewed, entries extracted, entries to be archived or deleted.

#### **Basics**

# Record Entry and FHIR Resources

- An EHR System manages a persistent EHR comprising Record Entries for
  - one or more provider organizations,
  - one to many individual practitioners and
  - one to many patients
- An EHR comprises
  - one to many Record Entry instances
- A Record Entry instance may comprise
  - one to many FHIR Resource instance(s)

## Project Focus/Success Criteria

# FHIR Enabled Lifecycle Events

Project Focus	Success Criteria
Binds (joins) Resource Instance(s) together in Record Entry Instance:  • Including applicable Clinical, Administrative, Infrastructure Resources	<ul> <li>Complete specification of baseline Set of FHIR Resources applicable at each Record Lifecycle Event (1-24) and captured in the resulting Record Entry Instance</li> <li>Allowing additional Resources to be bound in a Record Entry Instance, per Clinical, Administration and/or other context</li> </ul>
Includes Pre- and Post-Lifecycle Event Entry States • e.g., before/after amendment or translation	Complete specification of how both pre- and post-lifecycle event states (of FHIR Resources) are captured and preserved in one or more Record Entries

## Project Focus/Success Criteria

# FHIR Enabled Lifecycle Events

Project Focus	Success Criteria
Includes Action/Event Metadata	Complete specification of Action/Event Metadata (in FHIR Resources) per Record Entry
Includes Attestation and Content Binding • With or without Digital Signature	<ul> <li>Complete specification of:</li> <li>Attestation and/or Digital Signature bound to Record Entry content</li> </ul>

#### EHR Record Lifecycle/Lifespan

## Dimensions of End-to-End Flow

## Record Lifespan

## 1. Within Single System

- Starting at point of origination, in Source System
- Starting at point of receipt, in Receiving System
- Ending at point of deletion

## 2. Across Multiple Systems

- Starting at point of origination, in Source System
- Traversing one or more Points of Exchange
- Ending at point of deletion, in each System

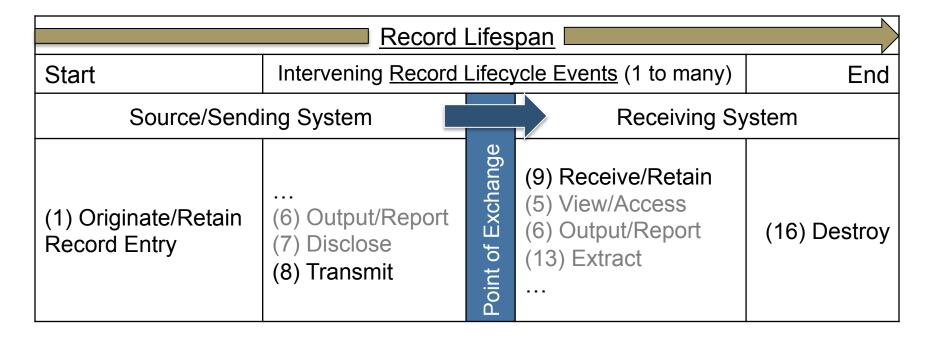

## Record Lifespan – End-to-End

# Within Single System

Record Lifespan					
Start	Intervening Record Lifecycle Events (0 to many)	End			
Source System (1) Originate/ Retain Record Entry	(2) Amend (3) Translate (25,4) Verify, Attest (5) View/Access (6) Output/Report (7) Disclose (8) Transmit (10) De-Identify	(16) Destroy			
Receiving System (9) Receive/Retain Record Entry	(11) Pseudo-nymize (12) Re-Identify (13) Extract (14,15) Archive, Restore (17,18) Deprecate/Retract, Re-Activate (19,20) Merge, Unmerge (21,22) Link, Unlink (23,24) Place, Remove Legal Hold (26,27) Encrypt, Decrypt	(16) Destroy			

#### Record Lifespan – End-to-End

# Across Multiple Systems

Repeated at each point of exchange...
