**«Lane» Publishing Facilitator**

1. A stakeholder identifies a need or issue and records it in the Gforge Tracker.
2. Periodically, the facilitator reviews all Tracker issues, proposes solutions where appropriate, and groups them onto the meeting agenda.
3. At the biweekly meeting, the group reviews the issues and proposals.
4. The modeler applies approved changes to the work-in-progress Implementation Guide and posts it to the GForge site.

New Version?

Confirm work in progress up-to-date

Generate document

IG WIP

IG Version

Forward new version to publishing

1. The group determines when it is desirable to publish a new version.
2. The group determines the scope and date of the version. Typically, this will be "whatever is current" and "as soon as possible."
3. The modeler ensures the work-in-progress guide is up-to-date, generates the document, and forwards it to the publishing facilitator.
4. The publishing facilitator guides the document through the publication process. A new version appears on the HL7 DSTU site.
