Pre/Post Entry Content and…
Record Entry Lifecycle

Lifecycle Starts: at Point of Origination/Creation as New Event

	Prior Event Added…	During Interval between Events Retains (at rest): Indivisibly+Immutably	PRE	At New Event Adds…	POST
Basic	1 SecurityEvent instance	1 or more SecurityEvent instances >> One per each prior Record Lifecycle Event		→ One SecurityEvent instance	Becomes Prior Event
w/Provenance	1 Provenance instance	1 or more Provenance instances >> One per each prior Record Lifecycle Provenance Event		→ One bound Provenance instance	
w/Provenance	1 or more other resource instance(s)	1 or more other FHIR resource instances > Corresponding to Action(s) Taken > As documented in Record Entry(ies)		→ One or more bound resource instance(s)	

Originate/Retain Record Entry

With Event Evidence (RI.1.1.1.1)➔
⬇ At Lifecycle Event Occurrence (RI.1.1.1)

Vetted by RM-ES

1. The system SHALL provide the ability to capture (originate) a Record Entry instance corresponding to an Action instance and context.
2. The system SHALL capture a unique instance identifier for each Record Entry.
3. The system SHALL capture the signature event (e.g., digital signature) of the origination entry Author, binding signature to Record Entry content.
4. The system SHALL provide the ability to capture both structured and unstructured content in Record Entries.
5. The system SHALL provide the ability to capture Record Entries from information recorded during system downtime.
6. The system SHOULD provide the ability to integrate Record Entries from Information recorded during system downtime.
7. The system SHALL provide the ability to capture date/time an Action was taken or data was collected if different than date/time of the Record Entry.
8. The system SHOULD capture metadata that identifies the source of non-originated Record Entry (e.g., templated, copied, duplicated, or boilerplate information).
9. The system MAY provide the ability to tag unstructured Record Entry content to organize it according to need, for example, in a time-related fashion or by application-specific groups (such as photographs, handwritten notes, or auditory sounds), or by order of relative importance.
10. The system MAY capture and maintain a Record Entry encoded as a standards-based data object (e.g., HL7 Continuity of Care, other HL7 CDA R2 Document, ISO 13606 artifact).
11. The system MAY capture and maintain a standards-based data object to mirror (be duplicate and synchronous with) internal Record Entry representation.

Fulfilled by FHIR Resource Implementation ▬▬
Lifecycle Event Metadata (who, what, when, where, why) ▬▬
Others to consider ▬▬

1. The system SHALL audit each occurrence when a Record Entry is originated and retained.
2. The system SHALL capture identity of the organization where Record Entry content is originated.
3. The system SHALL capture identity of the patient who is subject of Record Entry content.
4. The system SHALL capture identity of the individual(s) who performed the Action documented in Record Entry content.
5. The system SHALL capture identity of the user who entered/authored Record Entry content.
6. The system SHALL capture identity of the system application which originated Record Entry content.
7. IF the source of Record Entry content is a device THEN the system SHALL capture identity of the device.
8. The system SHALL capture the Action as evidenced by Record Entry content.
9. The system SHALL capture the type of Record Event trigger (i.e., originate/retain).
10. The system SHALL capture date and time of Action occurrence as evidenced by Record Entry content.
11. The system SHALL capture date and time Record Entry content is originated.
12. The system MAY capture the duration of the Action evidenced by Record Entry content.
13. The system MAY capture the physical location of the Action evidenced by Record Entry content.
14. The system SHOULD capture identity of the location (i.e., network address) where Record Entry content is originated.
15. The system MAY capture the rationale for the Action evidenced by Record Entry content.
16. The system MAY capture the rationale for originating Record Entry content.
17. IF Record Entry content includes templates (boilerplate information) or copied (duplicated) information THEN the system SHOULD capture the source of such content.

- From S&I Data Provenance Community Initiative

- Examples with Record Lifecycle Events

    – http://wiki.hl7.org/images/7/79/ONC-Data_Provenance-User_Story_Examples-20140818.pdf

Before mid-March…
To Do's

- Resolve SecurityEvent → generic Event
- Add Reason (0..*) and Policy (0..*) attributes to SecurityEvent.Event
- Add Location (0..1) attribute to SecurityEvent.Participant
- Add multi-purpose (multi-signature role) Signature resource
- Resolve Action metadata: what, when, where, why
- Add "record lifecycle event" to code set for SecurityEvent.Object.type attribute

Before mid-March…

To Do's

- Front Matter – description, scope and purpose:
  - Record Lifecycle Event Implementation Guide
  - Provenance Profile
  - SecurityEvent Profile
  - Conformance Guide
- Add RelatedPerson to Practitioner|Patient| Device choice (per Lloyd)

Before mid-March…

To Do's

- Resolve reason (including purpose of use) code set

- Resolve lifecycle code set (to include 27 Record Lifecycle Events)

Record Entry and FHIR Resources

- An EHR System manages a persistent EHR comprising Record Entries for
  - One or more provider organizations,
  - One or more individual practitioners, and
  - Many patients
- An EHR comprises
  - Many Record Entry instances
- A Record Entry instance may comprise
  - One or more FHIR Resource instance(s)
  - With signature bindings

Project Focus/Success Criteria
FHIR Enabled Lifecycle Events

Project Focus	Success Criteria
Binds (joins) FHIR Resource Instance(s) together in Record Entry Instance: • Including applicable Clinical, Administrative, Infrastructure Resources • Based on Action(s) Taken	• Complete specification of baseline Set of FHIR Resources applicable at each Record Lifecycle Event (1-27) and captured in the resulting Record Entry Instance • Allowing additional Resources to be bound in a Record Entry Instance, per Clinical, Administrative and/or other context
Includes Pre- and Post-Lifecycle Event Entry States • e.g., before/after amendment or translation	• Complete specification of how both pre- and post-lifecycle event states (of FHIR Resources) are captured and preserved in one or more Record Entries

Project Focus/Success Criteria
FHIR Enabled Lifecycle Events

Project Focus	Success Criteria
Includes Action/Event Metadata	• Complete specification of Action/Event Metadata (in FHIR Resources) per Record Entry
Includes Attestation and Content Binding • With/without Digital Signature	• Complete specification of: • Attestation and/or Digital Signature bound to Record Entry content
