

Introduction

Gordon is in his 40s and considers herself to be healthy and active. He has started to forget things - where he put his keys or why he walked into a room for example. This troubled him as this was highly unusual for him. He made an appointment with his doctor, Emily van Klimpt. During the appointment, Dr. van Klimpt suggested referring Gordon to a local mental health program - which specialized in early memory loss - for additional assessment.

Header Data

- Patient: Gordon
- Referring Physician
 - Dr. Emily van Klimpt
 - Address: 39 S Main St, New City, NY 10956
 - Phone: (845) 555-5326
