## Lifecycle Events

# Pre/Post Record Entry w/FHIR

	<u>At Prior Event</u> Added	<u>At Interval between Events</u> Retains/At Rest	PRE	<u>At New Event</u> Adds	POST
Simple	1 SecurityEvent instance	1 or more SecurityEvent instances >> One per each prior Record Lifecycle Event	➔	1 SecurityEvent instance	<i>Becomes Prior Event</i>
w/Provenance	1 Provenance instance	1 or more Provenance instances >> One per each prior Record Lifecycle Provenance Event	➔	1 Provenance instance	
	1 or more other resource instance(s)	1 or more other FHIR resource instances > Corresponding to Action(s) Taken > As documented in Record Entry(ies)	➔	1 or more other resource instance(s)	

# Originate/Retain Record Entry (RI.1.1.1)

## ↓ At Lifecycle Event Occurrence With Event Evidence →

1. The system SHALL provide the ability to capture (originate) a Record Entry instance corresponding to an Action instance and context.
2. The system SHALL capture a unique instance identifier for each Record Entry.
3. The system SHALL capture the signature event (e.g., digital signature) of the origination entry Author, binding signature to Record Entry content.
4. The system SHALL provide the ability to capture both structured and unstructured content in Record Entries.
5. The system SHALL provide the ability to capture Record Entries from information recorded during system downtime.
6. The system SHOULD provide the ability to integrate Record Entries from Information recorded during system downtime.
7. The system SHALL provide the ability to capture date/time an Action was taken or data was collected if different than date/time of the Record Entry.
8. The system SHOULD capture metadata that identifies the source of non-originated Record Entry (e.g., templated, copied, duplicated, or boilerplate information).
9. The system MAY provide the ability to tag unstructured Record Entry content to organize it according to need, for example, in a time-related fashion or by application-specific groups (such as photographs, handwritten notes, or auditory sounds), or by order of relative importance.
10. The system MAY capture and maintain a Record Entry encoded as a standards-based data object (e.g., HL7 Continuity of Care, other HL7 CDA R2 Document, ISO 13606 artifact).
11. The system MAY capture and maintain a standards-based data object to mirror (be duplicate and synchronous with) internal Record Entry representation.

1. The system SHALL audit each occurrence when a Record Entry is originated and retained.
2. The system SHALL capture identity of the organization where Record Entry content is originated.
3. The system SHALL capture identity of the patient who is subject of Record Entry content.
4. The system SHALL capture identity of the individual(s) who performed the Action documented in Record Entry content.
5. The system SHALL capture identity of the user who entered/authored Record Entry content.
6. The system SHALL capture identity of the system application which originated Record Entry content.
7. IF the source of Record Entry content is a device THEN the system SHALL capture identity of the device.
8. The system SHALL capture the Action as evidenced by Record Entry content.
9. The system SHALL capture the type of Record Event trigger (i.e., originate/retain).
10. The system SHALL capture date and time of Action occurrence as evidenced by Record Entry content.
11. The system SHALL capture date and time Record Entry content is originated.
12. The system MAY capture the duration of the Action evidenced by Record Entry content.
13. The system MAY capture the physical location of the Action evidenced by Record Entry content.
14. The system SHOULD capture identity of the location (i.e., network address) where Record Entry content is originated.
15. The system MAY capture the rationale for the Action evidenced by Record Entry content.
16. The system MAY capture the rationale for originating Record Entry content.
17. IF Record Entry content includes templates (boilerplate information) or copied (duplicated) information THEN the system SHOULD capture the source of such content.

## EHR-S FM Record Infrastructure (RI) – Lifecycle Events

# Event Evidence/Metadata

	Action	Corresponding Record Entry(ies)
<b>Who</b>	Patient, Subject of Action or Entry	User/Author Source of Entry
	Practitioner, Performer of Action	System/Device Source of Entry
	Organization of Action	
<b>What</b>	Action Taken	Record Lifecycle Event
<b>When</b>	Date/Time/Duration of Action Occurrence	Date/Time of Entry Occurrence
<b>Where</b>	Location of Action Taken	Device ID, Network Address of Entry Occurrence
<b>Why</b>	Rationale, Purpose for Action Taken	Rationale, Purpose of Entry

# Additional Evidence or Metadata

	Action	Corresponding Record Entry(ies)
And...	N/A	Data, Document or Artifact ID
		Amendment/Translation Sequence
		Pointer to Pre-Event Entry: e.g., pre-amendment, pre-translation
		Event flagged as known Disclosure
		Permissions associated with Entry Content
		Entries in Event Transaction: e.g., set of entries viewed, entries extracted, entries to be archived or deleted.

## Metadata

# Who

Organization	Provenance.Agent	role : Coding 1..1 « <b>ProvenanceAgentRole+</b> » type : Coding 1..1 « <b>ProvenanceAgentType+</b> » reference : uri 1..1
	SecurityEvent.Participant	role : CodeableConcept 0..* « DICOMRoleId+ » reference : Resource( <b>Organization</b>  Practitioner Patient Device) 0..1 userId : string 0..1
Patient	Provenance.Agent	role : code 1..1 « <b>ProvenanceEntityRole</b> » type : Coding 1..1 « <b>ProvenanceEntityType+</b> » reference : uri 1..1
	SecurityEvent.Participant	role : CodeableConcept 0..* « DICOMRoleId+ » reference : Resource(Organization Practitioner  <b>Patient</b>  Device) 0..1 userId : string 0..1
Action - Performer	Provenance.Agent	role : Coding 1..1 « <b>ProvenanceAgentRole+</b> » type : Coding 1..1 « <b>ProvenanceAgentType+</b> » reference : uri 1..1
	SecurityEvent.Participant	role : CodeableConcept 0..* « DICOMRoleId+ » reference : Resource( <b>Organization</b>  Practitioner Patient Device) 0..1 userId : string 0..1

## Metadata

# Who, con't

Record - Author/ User	Provenance.Agent	<code>role</code> : Coding 1..1 « <code>ProvenanceAgentRole+</code> » <code>type</code> : Coding 1..1 « <code>ProvenanceAgentType+</code> » <code>reference</code> : uri 1..1
	SecurityEvent.Participant	<code>role</code> : CodeableConcept 0..* « <code>DICOMRoleId+</code> » <code>reference</code> : Resource( <code>Practitioner Patient Device</code> ) 0..1 <code>userId</code> : string 0..1
Record - System/Device	Provenance.Agent	<code>role</code> : Coding 1..1 « <code>ProvenanceAgentRole+</code> » <code>type</code> : Coding 1..1 « <code>ProvenanceAgentType+</code> » <code>reference</code> : uri 1..1
	SecurityEvent.Participant	<code>role</code> : CodeableConcept 0..* « <code>DICOMRoleId+</code> » <code>reference</code> : Resource( <code>Practitioner Patient Device</code> ) 0..1 <code>userId</code> : string 0..1

## Distinguishing Action from Record Metadata

## Metadata

# What

Action - Taken	SecurityEvent.Event	<b>type</b> : CodeableConcept 1..1 « SecurityEventType+ » <b>subtype</b> : CodeableConcept 0..* « SecurityEventSubType+ » <b>action</b> : code 0..1 « SecurityEventAction »
	?	?
Record - Lifecycle Event	SecurityEvent.Event	<b>type</b> : CodeableConcept 1..1 « SecurityEventType+ » <b>subtype</b> : CodeableConcept 0..* « SecurityEventSubType+ » <b>action</b> : code 0..1 « SecurityEventAction »
	SecurityEvent.Object	<b>identifier</b> : Identifier 0..1 <b>reference</b> : Resource(Any) 0..1 <b>type</b> : code 0..1 « SecurityEventObjectType » <b>role</b> : code 0..1 « SecurityEventObjectRole » <b>lifecycle</b> : code 0..1 « SecurityEventObjectLifecycle »

Action Taken = <GAP>?

## Metadata

# When

Action - Date/ Time	Provenance	<b>target</b> : Resource(Any) 1..* <b>period</b> : Period 0..1
Record - Date/ Time	Provenance	<b>recorded</b> : instant 1..1
	SecurityEvent.Event	<b>dateTime</b> : instant 1..1
Action - Duration/ Elapsed Time	Provenance	<b>period</b> : Period 0..1

## Metadata

# Where

Action - Physical Location	Provenance	<code>location</code> : Resource(Location) 0..1
	SecurityEvent.Event	<code>location</code> : <i>Resource(Location) 0..1</i>
Record - Network Address	Provenance	<code>location</code> : Resource(Location) 0..1
	SecurityEvent.Participant.Network	<code>identifier</code> : string 0..1 <code>type</code> : code 0..1 « <code>SecurityEventParticipantNetworkType</code> »

Add “location” to SecurityEvent.Event?

## Metadata

# Why

Action - Reason, Rationale, Purpose	Provenance	<i>reason</i> : CodeableConcept 0..1
	SecurityEvent.Event	<i>reason</i> : CodeableConcept 0..1
Record - Reason, Rationale, Purpose	Provenance	<i>reason</i> : CodeableConcept 0..1
	SecurityEvent.Event	<i>reason</i> : CodeableConcept 0..1

Add “reason” to SecurityEvent.Event?

## FHIR Resource

# Provenance

Resource	Attribute	Description	Value Set
Provenance		Who, What, When for a set of resources	
	<b>target</b> : Resource(Any) 1..*	Target resources (usually version specific)	
	<b>period</b> : Period 0..1	When the activity occurred	
	<b>recorded</b> : instant 1..1	When the activity was recorded/updated	
	<b>location</b> : Resource(Location) 0..1	Where the activity occurred, if relevant	
	<b>reason</b> : CodeableConcept 0..1	Reason activity is occurring	

Create value set for “reason”?

## FHIR Resource

# Provenance.Agent

Resource	Attribute	Description	Value Set
Provenance.Agent		Person, organization, records, etc. involved in creating resource	
	<code>role</code> : Coding 1..1 « <code>ProvenanceAgentRole+</code> »		Enterer, performer, author, verifier, attester, informant, source, cc, application, daemon
	<code>type</code> : Coding 1..1 « <code>ProvenanceAgentType+</code> »		Practitioner, organization, software, record, document
	<code>reference</code> : uri 1..1		

Review value sets for “role” and “type”.

## FHIR Resource

# SecurityEvent.Event

Resource	Attribute	Description	Value Set
SecurityEvent.Event		What was done	
	<b>type</b> : CodeableConcept 1..1 « SecurityEventType+ »	Type/identifier of event	<incomplete> Rest + DICOM codeset
	<b>subtype</b> : CodeableConcept 0..* « SecurityEventSubType+ »	More specific type/id for the event	<incomplete> Read, vread, update, delete, validate, create, history-instance, history-type, history-system, search-type, search-system, transaction + DICOM codeset
	<b>action</b> : code 0..1 « SecurityEventAction »	Type of action performed during the event	<incomplete>
	<b>dateTime</b> : instant 1..1	Time when the event occurred on source	
	<b>location</b> : Resource(Location) 0..1	TBD	
	<b>reason</b> : CodeableConcept 0..1	TBD	TBD

Review value sets for “type”, “subtype” and “action”.  
Add “location” and “reason”, value set for “reason”.

## FHIR Resource

# SecurityEvent.Object

Resource	Attribute	Description	Value Set
SecurityEvent.Object		Specific instances of data or objects that have been accessed	
	<b>identifier</b> : Identifier 0..1	Specific instance of object (e.g. versioned)	
	<b>reference</b> : Resource(Any) 0..1	Specific instance of resource (e.g. versioned)	
	<b>type</b> : code 0..1 « SecurityEventObjectType »	Object type being audited	<incomplete>
	<b>role</b> : code 0..1 « SecurityEventObjectRole »	Functional application role of Object	1) patient; 2) location; 3) report; 4) resource; 5) master file; 6) user; 7) list; 8) doctor; 9) subscriber; 10) guarantor; 11) security user entity; 12) security user group; 13) security resource; 14) security granularity definition; 15) practitioner; 16) data destination; 17) data reposition; 18) schedule; 19) customer; 20) job; 21) job stream; 22) table; 23) routing criteria; 24) query.
	<b>lifecycle</b> : code 0..1 « SecurityEventObjectLifecycle »	Life-cycle stage for the object	<incomplete>

Review value sets for “type”, “role” and “lifecycle”.

## FHIR Resource

# SecurityEvent.Participant.Network

Resource	Attribute	Description	Value Set
SecurityEvent.Participant.Network		Logical network location for application activity	
	<b>identifier</b> : string 0..1	Identifier for the network access point of a user device	
	<b>type</b> : code 0..1 « SecurityEventParticipantNetworkType »	The type of network access point	<incomplete>

Review value set for “type”.

# Record Entry and FHIR Resources

- An EHR System manages a persistent EHR comprising Record Entries for
  - one or more provider organizations,
  - one to many individual practitioners and
  - one to many patients
- An EHR comprises
  - one to many Record Entry instances
- A Record Entry instance may comprise
  - one to many FHIR Resource instance(s)

## Project Focus/Success Criteria

# FHIR Enabled Lifecycle Events

Project Focus	Success Criteria
<p>Binds (joins) FHIR Resource Instance(s) together in Record Entry Instance:</p> <ul style="list-style-type: none"><li>• Including applicable Clinical, Administrative, Infrastructure Resources</li><li>• Based on Action(s) Taken</li></ul>	<ul style="list-style-type: none"><li>• Complete specification of baseline Set of FHIR Resources applicable at each Record Lifecycle Event (1-24) and captured in the resulting Record Entry Instance</li><li>• Allowing additional Resources to be bound in a Record Entry Instance, per Clinical, Administration and/or other context</li></ul>
<p>Includes Pre- and Post-Lifecycle Event Entry States</p> <ul style="list-style-type: none"><li>• e.g., before/after amendment or translation</li></ul>	<ul style="list-style-type: none"><li>• Complete specification of how both pre- and post-lifecycle event states (of FHIR Resources) are captured and preserved in one or more Record Entries</li></ul>

Project Focus/Success Criteria

# FHIR Enabled Lifecycle Events

Project Focus	Success Criteria
Includes Action/Event Metadata	<ul style="list-style-type: none"><li>• Complete specification of Action/Event Metadata (in FHIR Resources) per Record Entry</li></ul>
Includes Attestation and Content Binding <ul style="list-style-type: none"><li>• With/without Digital Signature</li></ul>	<ul style="list-style-type: none"><li>• Complete specification of:<ul style="list-style-type: none"><li>• Attestation and/or Digital Signature bound to Record Entry content</li></ul></li></ul>

# Dimensions of End-to-End Flow

## Record Lifespan

### 1. Within Single System

- Starting at point of origination, in Source System
- Starting at point of receipt, in Receiving System
- Ending at point of deletion

### 2. Across Multiple Systems

- Starting at point of origination, in Source System
- Traversing one or more Points of Exchange
- Ending at point of deletion, in each System

## Record Lifespan – End-to-End

# Within Single System

Record Lifespan 		
Start	Intervening Record Lifecycle Events (0 to many)	End
<u>Source System</u> (1) Originate/ Retain Record Entry	(2) Amend (3) Translate (25,4) Verify, Attest (5) View/Access (6) Output/Report (7) Disclose (8) Transmit (10) De-Identify (11) Pseudo-nymize (12) Re-Identify (13) Extract (14,15) Archive, Restore (17,18) Deprecate/Retract, Re-Activate (19,20) Merge, Unmerge (21,22) Link, Unlink (23,24) Place, Remove Legal Hold (26,27) Encrypt, Decrypt	(16) Destroy
<u>Receiving System</u> (9) Receive/Retain Record Entry		(16) Destroy

Record Lifespan – End-to-End

# Across Multiple Systems

Repeated at each point of exchange...
