

TSC Presentation

EHR System Function and Information Model (EHR-S FIM) Release 3.0 Preparation (ISO/HL7 10781 r3:2017 EHR-S FIM)

**Co-Chairs: Gary Dickinson, Don Mon, Helen Stevens Love,
Mark Janczewski, John Ritter, Patricia Van Dyke**

Facilitator: Steve Hufnagel

January 14, 2014 DRAFT-C

Executive Summary

EHR-S FM Release-2 is being finalized and HL7 PSS #688 is for EHR-S Function-and-Information Model (EHR-S FIM) Release-3

The EHR Interoperability WG current focus is on the '2017 EHR-S FIM Release-3 roadmap to make EHR-S FM r2 clear, complete, concise, correct, consistent, traceable, easy-to-use functions and conformance criteria using HL7 Service Aware Interoperability Framework (**SAIF**), HL7 Fast Healthcare Interoperability Resources (**FHIR**), US-realm Federal Health Information Model (**FHIM**) and Meaningful Use criteria (**MU2**) and other, as needed, SAIF Implementation Guide artifacts within an UML-tool based knowledge and expert-system platform; where, analysts and implementers can efficiently profile domain, realm and enterprise EHR functional use-cases, conformance-criteria scenarios and information-exchange interoperability-specifications for message, document and services' exchange-architecture implementations, tests and certifications.

Key Features

ISO/HL7 10781 r3:2017 EHR-S FIM

EHR-S FIM R-3 UML tool-based knowledge-and-expert system-platform

1. Make r2 clear, complete, concise, correct, consistent, traceable, easy-to-use
2. Use HL7 Service Aware Interoperability Framework (**SAIF**),
3. Include, as needed, SAIF Implementation Guide (**SAIF IG**) artifacts
 - Include HL7 Fast Healthcare Interoperability Resources (**FHIR**),
 - Include US-realm Federal Health Information Model (**FHIM**)
 - Include US-realm Meaningful Use Stage-2 (**MU2**) criteria
4. where, users can efficiently profile domain, realm and enterprise
 - EHR functional use-cases, their conformance-criteria scenarios linked-to
 - information-exchange interoperability-Specifications for message, document and services' exchange-architecture implementations, tests and certifications.

HL7 Product-Line Unification Opportunity Using '2017 EHR-S FIM Release-3

APPROACH: Exchange Architecture Specifications including:

- Domain Analysis Models and RIM integration
- implementation-paradigm profile-additions
 - V2, V3 and CDA messages and documents,
 - FHIR, web-services, interface behavioral-specifications and
 - realm-specific data-models with terminology-bindings

PRODUCT: User-Customizable EA tool populated with HL7 Products, capable of

- Being adapted and extended to specific domains, realms and enterprises.
- generating fully-qualified semantically-interoperable HL7-SAIF exchange-architectures of system Information-Exchanges (**IEs**) and implementable, testable and certifiable Interoperability-Specifications (**ISs**).

Recommended '2017 EHR-S FIM Release-3 Vision

1. EHR-S FIM R3 be the HL7 Unification Umbrella

- Management of EHR Interoperability Complexity
- Organization of domains, realm and enterprise specializations
- HL7 SAIF Implementation Guides
- HL7 Conformance Project
- Release 3 built within overarching (SAIF) framework to ensure use case functionality, data and information traceability.

2. EHR “Product-Line” Framework within the FIM Umbrella

- Such as EHR-S, PHR-S, LIS, Imaging, Pharmacy
- Led by other workgroups, such as OO Lab

3. HL7 Governance harmonize components within Framework

- FHA FHIM define HL7 US-Realm FHIR-profile
- EHR-S FIM EA-Platform be foundation of HL7 Conformance Test Project
- Sparx EA be the delivery platform to provide HL7 Requirements-Specifications to Users/Implementers

Benefit of HL7 Product-Line Unification Around '2017 EHR-S FIM Release-3

1. Users can start with EHR-S FIM use-cases and scenarios
2. EHR-S FIM R3 provides SAIF IG clinical context and requirements
3. EHR-S FIM functions can be linked to specific domain, realm and enterprise Information Exchange (**IE**) Interoperability Specifications (**ISs**)
4. FHIR provides baseline for implementation paradigm profiles
5. EHR-S FIM FHIR-profiles can be domain, realm and enterprise specific
6. Example: FHA FHIM can be adapted to-be the US Realm FHIR Profile.
7. Other implementation paradigms for message, service and document .
8. SAIF Implementation guides, can be generated, tested and certified.
9. Sparx EA becomes HL7 Knowledge-Base platform

Thank you for your help and Consideration!

2013 Immunization Management Prototype is at

http://wiki.hl7.org/images/3/39/HL7_EHR-S_FIM_R3_Prototype_Immunization_Management_Report.pdf

PSS #688: EHR-S FIM R3 Approach

1. Add **Conceptual Information Model & Logical Data Model** to EHR-S Functions
2. Demonstrate **SAIF methodology** to Populate Interoperability Specification with HL7 artifacts and EHR System Function and Information Model (EHR-S FIM)
3. Incorporate **S&I Framework simplification methodology**
 - EHR-S function descriptions correspond to Use Case (**UC**) scenarios events.
 - New scenarios composed from common actors, actions/activities and their inputs & outputs
 - EHR-S FM should list inputs and outputs to functions (e.g. standard IO nouns and verbs)
4. UC simplification implies that EHR-S FM should **harmonize & manage**:
 - Common actors/entities/concepts, their definitions, their data elements
 - Common Actions/Activities and their input and output entities.
 - Common requirements.
 - Domain specific profile context defined by assertions
5. Maintain **domain profile traceability** as HL7 Work Groups (WGs) define
 - Domain Analysis Models (DAMS), Domain Information Models (DIMS),
 - Detailed Clinical Models (DCLs), etc.

2013 EHRS FIM R3 Prototype Purpose

http://wiki.hl7.org/images/3/39/HL7_EHR-S_FIM_R3_Prototype_Immunization_Management_Report.pdf

- Demonstrate Information Model approach. For each EHR-S FM Function:
 - “Sequence” of actions/activities which may have information exchanges (inputs and outputs)
 - Assertions (e.g., requirements predicates)
 - Requirements (aka conformance criteria)
 - Business Rules
 - Conceptual Information Model based on function statement, description & criteria
 - Logical Data Model
 - **ISSUE:** As this becomes a standard, what should be the basis to define the data elements for each logical data module/class or should we NOT define the data elements?
 - HL7 RIM, DAMS, DIMS, DCLs, etc.
 - US Federal Health Information Model (FHIM)
 - Other information models (Canada, New Zealand, GB, Singapore)
 - Dependencies among functions (“see also”)
 - Assertions and Common Actors, Actions, Data Element Set, data dictionary (UC Simplification)
 - Service, Message or Document Profiles: content & transport interoperable standards-specifications

Notional Set of HL7 Artifacts within an Enterprise Compliance and Conformance Framework (ECCF)

2013 Prototype Conclusions

- EHR-S FIM can populate portions of SAIF for HL7 WGs
 - Information and Computational Dimensions
 - Conceptual and Logical Perspectives
- EHR-S FIM can be composed into higher level capabilities by functional analysts and system engineers
 - Encourage reuse
 - Avoid duplication
- EHR-S FM can be the basis for Interoperability Specifications
 - Messages, Documents. Services
 - FHIR domain, realm and enterprise profiles
- Using Sparx EA as HL7 EHR-S FIM Requirements-Specifications platform can support HL7 Conformance Test and Certification Project
