Assessment

1. Recurrent GI bleed of unknown etiology; hypotension perhaps secondary to this but as likely secondary to polypharmacy.
2. Acute on chronic anemia secondary to #1.
3. Azotemia, acute renal failure with volume loss secondary to #1.
4. Hyperkalemia secondary to #3 and on ACE and K+ supplement.
5. Other chronic diagnoses as noted above, currently stable.

Plan of Treatment

Planned Activity	Planned Date
Colonoscopy	20120512

Procedure Indications

The procedure is performed for screening in a low risk individual.

Planned Procedure

Colonoscopy

PROCEDURE DESCRIPTION

The patient was brought to the operating room, placed in the supine position, and general anesthesia was induced. A detailed technical narrative of a laparoscopic appendectomy from initial incision to placement of any dressings follows.

Preoperative Diagnosis

Appendicitis

Anesthesia

Conscious sedation with propofol 200 mg IV

Surgical Drains

Penrose drain placed

Procedure Findings

A 6 mm sessile polyp was found in the ascending colon and removed by snare, no cautery. Bleeding was controlled. Moderate diverticulosis and hemorrhoids were incidentally noted.

Estimated Blood Loss

Minimal

Procedure Implants

No implants were placed.

Specimens Taken

Ascending colon polyp

Complications

Asthmatic symptoms while under general anesthesia.

Postoperative Diagnosis

Appendicitis with periappendiceal abscess

Postprocedure Diagnosis

1. Sigmoid diverticulosis, moderate
2. Internal hemorrhoids
3. Colon polyp, 6mm, ascending colon

Procedure Disposition

The patient was taken to the Endoscopy Recovery Unit in stable condition.
