

HL7 Implementation Guide for CDA R2:
Emergency Medical Services Patient Care Report (PCR)
(US Realm)

Draft Standard for Trial Use

December, 2011

Publication of this draft standard for trial use and comment has been approved by Health Level Seven International (HL7). This draft standard is not an accredited American National Standard. The comment period for use of this draft standard shall end 24 months from the date of publication. Suggestions for revision should be submitted at <http://www.hl7.org/dstucomments/index.cfm>.

Following this 24 month evaluation period, this draft standard, revised as necessary, will be submitted to a normative ballot in preparation for approval by ANSI as an American National Standard. Implementations of this draft standard shall be viable throughout the normative ballot process and for up to six months after publication of the relevant normative standard.

IMPORTANT NOTES:

- A. **If you are the individual that downloaded or ordered this HL7 Standard, specification or other work (in each and every instance "Material"),** the following describes the permitted uses of the Material.
- B. **If you are NOT such individual,** you are not authorized to make any use of the Material. To obtain an authorized copy of this Material, please visit <http://www.hl7.org/implement/standards/index.cfm>.
- C. **If you are not an HL7 Organizational Member,** the following are your permitted uses of this Material:
 - 1. **Read and Copy License Only.** HL7 hereby grants you the right, without charge, to download and copy (for personal use only) this Material for study purposes only. This license grant does not include the right to sublicense or modify the Material, or to implement the Material, either in whole or in part, in any product or service. Please see <http://www.hl7.org/legal/ippolicy.cfm> for the full license terms governing the Material.
- D. **If you are an HL7 Organizational Member,** the following are your permitted uses of this Material.
 - 1. **Implementation License Terms.**
 - 1.1 **Definitions.** As used in this Agreement, the following terms shall have the following definitions:

"Compliant Product" is a product or service that implements Material that is an HL7 Specification in whole or in part.

"End User" is a company, entity or individual that is the ultimate purchaser or licensee from Licensee of a Compliant Product.

1.2 License. In consideration of becoming an Organizational member of HL7 and continuing to pay the appropriate HL7 Organizational membership fees in full, HL7 hereby grants to you without additional charge, on a perpetual (except as provided for in the full license terms governing the Material), non-exclusive and worldwide basis, the right to (a) download, copy (for internal purposes only) and share this Material with your employees and consultants for study purposes, and (b) utilize the Material for the purpose of developing, making, having made, using, marketing, importing, offering to sell or license, and selling or licensing, and to otherwise distribute, Compliant Products, in all cases subject to the conditions set forth in this Agreement and any relevant patent and other intellectual property rights of third parties (which may include members of HL7). No other license, sublicense, or other rights of any kind are granted under this Agreement.

Please see <http://www.hl7.org/legal/ippolicy.cfm> for the full license terms governing the Material.

This implementation guide was developed with the support and sponsorship of the National EMS Information System (NEMSIS), directed by Clay Mann. Additional clinical guidance was provided by Dr. Greg Mears. NEMSIS is supported by the US National Highway Traffic Safety Administration, the Centers for Disease Control, and the Health Resources and Services Administration, as well as dozens of other government agencies, universities, and professional organizations.

Shakir Consulting was instrumental in the creation of the domain analysis model and constrained model that inform this specification.

We leaned heavily on the work done by HL7's Structured Documents committee, as well as exemplary guides produced by other teams, most notably the Healthcare Associated Infections team.

The work could not have been completed without the indefatigable assistance of Jaci Phillips and the support of the Regenstrief institute.

This document is the result of the efforts of many people. Clay Mann and Greg Mears of NEMSIS provided guidance, domain expertise and resources. Anita Walden of Duke University and the Clinical Interoperability Council provided procedural assistance and support. Sarah Ryan provided vocabulary analysis, with assistance from Russ Hamm and Jerry Sable. Jay Lyle provided project management, modeling, and editorial services. Abdul-Malik Shakir provided both modeling and procedural guidance, and Salimah Shakir provided modeling assistance. Rob Hausam and Keith Boone provided advice on implementing structured documents. Several members of the Clinical Interoperability Council, Emergency Care, and Public Health and Emergency Response provided feedback on the model in its various iterations.

1. About this document

This document is intended to guide software developers in generating CDA-compliant XML patient care reports, also known as run reports, from EMS agency crews to emergency departments and other interested parties. It consists of a set of constraints on the HL7 CDA R2 model mapped to the National EMS Information System (NEMSIS) data elements.

CDA, or Clinical Document Architecture, is a standard for information exchange. It is based on the HL7 Reference Information Model, but it constrains that model to a specific set of patterns. This document adds further constraints, so that it specifies not just a generic clinical document, but an Emergency Medical Services (EMS) Patient Care Report—a record of an Emergency Medical Services encounter with a patient. An EMS Patient Care Report is also known as a run report.

Further information about CDA is available at HL7.org.

This guide constrains the NEMSIS data set to the HL7 CDA R2 document format. NEMSIS is maintained by the NEMSIS Technical Assistance Center, a US organization funded by the National Highway Transportation Safety Administration, the Centers for Disease Control, the Health Resources and Services Administration, the University of Utah, and the University of North Carolina.

2. Audience

The audience for this document is software developers and development organizations who wish to produce or receive EMS patient care reports.

3. Approach

Our approach was first to convert the NEMSIS specification into an analysis-level class diagram in the Emergency Medical Services Domain Analysis Model (EMS DAM), initially balloted through HL7 in May of 2010 and finalized for the release in May 2011. The analysis model was then constrained to the HL7

Reference Information Model (RIM) in a Domain Information Model (DIM), balloted in January, 2011, and scheduled for minor revisions in September, 2011. The DAM is in the publication process; the DIM has not been published to date; current state versions are available in the HL7 ballot or by request.

This guide is the first implementable specification developed based on the EMS DIM.

An initial iteration, balloted in May 2011, supports what is commonly termed “level one” CDA compliance, i.e., a document with structured header information containing an unstructured document of some form (whether pdf, image, or other recognized format). In addition, this iteration supported “level two” compliance, in which human-readable text information is provided for sections identified in XML. A sender of a document, however, must choose whether to send the “level one” encapsulated document or the “level two” set of XML sections: a document containing both is not acceptable.

This iteration (in September, 2011) models the sections to “level three,” in which the sections also include detailed, structured information representing the section text. This structured information follows standard patterns in such a way that receiving applications will be able to process specific semantically identified elements for storage in medical records, application of business rules, or other computable services. This iteration also includes changes to the level two template assignments, so the May 2011 iteration is no longer correct.

Harmonization with Emergency Department specifications and *Data Elements for Emergency Department Systems* (DEEDS) involved use of extant LOINC codes for shared elements.

4. Change process

We expect this standard to change during the DSTU period. Issues should be reported on the HL7 Draft Standard for Trial Use (DSTU) comment page at <http://www.hl7.org/dstucomments/>. For more information and status on the DSTU period, consult the HL7 wiki.

5. How to use this document

Software developers should use the CDA xml schema to guide their production of EMS patient care reports. Mappings of NEMESIS elements to the CDA schema are included in this document. Coded elements should use the vocabularies referred to in the constraints.

The CDA schema is published by Health Level 7, and is available at
<http://www.hl7.org/implement/standards>.

5.1 Coded Values

Coded values are constrained to value sets. Value sets may be enumerated or defined by reference. This specification uses both kinds. Value sets already specified are referenced (ICD-10, RxNorm,, HL7, etc.). Sets defined by NEMESIS are listed in appendix D. These value sets are available from LOINC (<http://search.loinc.org/>); they will be available on the NEMESIS web site (nemsis.org), and via web service from the CDC (phinvads.cdc.gov). The LOINC answers will be registered as SNOMED CT concepts.

Several coded values have not been assigned LOINC answers: these will use the NEMSIS codes in the short term, and will be encoded to appropriate systems.

5.2 Information Scope

The NEMSIS data set supports many uses, including the transfer of patient care reports from EMS crews to emergency departments, the prepopulation of hospital electronic health records, identification of trauma registry candidates, and preparation of data for submission to NEMSIS for research.

Implementers may generate the same patient care reports that they generate today and attach them in "level one" documents, or they may populate the structured sections as specified herein.

Because the NEMSIS data set is so broad, it extends beyond the *Emergency Transfer of Care* specified by *Integrating the Healthcare Enterprise* (IHE). These templates may be harmonized in the future; at this point, they are distinct.

5.3 Implementation

This guide defines the information payload only. Implementers are encouraged to coordinate with one another by using the IHE framework (available at <http://www.ihe.net/>) to address expected capabilities of participating systems, including security and audit considerations.

5.4 Conventions

This document follows the conventions of the *Healthcare Associate Infection* (HAI) implementation guide. Salient conventions are reiterated here.

The terms SHALL, SHALL NOT, SHOULD, SHOULD NOT, and MAY in this document are to be interpreted as described in the HL7 Version 3 Publishing Facilitator's Guide. The keyword "SHALL" implies a lower cardinality of 1 but does not disallow NULL values. If NULL values are to be excluded, it will be via an additional explicit conformance statement.

Constraints that are specific to this guide—for which this guide defines the template—are numbered serially. Those that are inherited from other templates are provided for implementer convenience; they are prefixed with the source abbreviation ("CDA" for the root R2 specification; "GHC" for General header Constraints) and shaded. Those from the root CDA R2 specification are numbered according to the relevant line of the Hierarchical Description document (HD). Those from the General Header Constraints are numbered according to the constraint numbers in the *HL7 Implementation Guide for CDA Release 2: History and Physical (H&P) Notes*, release one.

Example:

- GHC CONF-7a: A ClinicalDocument/recordTarget/PatientRole/addr element SHALL be present, but MAY be null.

Constraints list both the line number of the relevant row in the CDA Hierarchical Definition and the reference to the NEMESIS V3 dataset. Many elements defined in the CDA header have no traceability to pre-existing NEMESIS elements.

Most questions have been assigned clinical LOINC identifiers; the balance are in process. Those not yet assigned are identified as “EMSTEMPCL_###,” where “###” is a serial number. These temporary identifiers will be replaced when the LOINC identifiers are issued.

5.5 Approach for Negation and Null Values

We use RIM attributes for observations that may require explicit negation or null values. If I have checked for signs of drug use, I can assert that a particular sign was found (with a proper value), that whether there were signs is unknown (with a null) or that there were no signs (with negation).

However, in collections of acts other than observations, epistemological attributes may have uncertain semantics. If a procedure is negated, it may not be clear whether the clinician is asserting that the procedure was not performed during the encounter or that it has never been performed on the patient. Similarly, you may document a history of specific disorders, but including a single, general but negated disorder implies assumptions about the scope of the negated disorder that are not explicitly modeled.

As a result, we manage negation and uncertainty for procedures with explicit observations. Using an observation allows the clinician to assert a history of zero disorders, or a lack of knowledge about disorders, without tying that assertion to a notional disorder that may imply unanticipated facts or questions. Questions supporting observations about procedures can differentiate between encounter and patient history, letting assertions about the truth or existence of the knowledge obtain in the appropriate scope.

As a result, the medical history sections include, in addition to problems, procedures, medications, and allergies, observations regarding the existence of problems, procedures, medications, and allergies.

5.6 Null Value Mapping

NEMESIS contains null values not listed in HL7. “Not applicable” maps directly to “Not applicable,” but “Not recorded” and “Not reported” must be represented as the general concept “No information.” These values may also be copied into Observation.text.

NEMESIS also contains “negative action values,” most of which are addressed with negation and special cases in this document. Some of the negative action values, however, are actually null values, and are recorded as “NI,” no information. A mapping of negative action values is provided in Appendix B.

5.7 Units

Physical quantities use the HL7 PQ data type, in which units are expressed in the Unified Code for Units of Measure (UCUM; 2.16.840.1.113883.6.8), available at <http://www.regenstrief.org>. Interface values that are not actual physical units are handled differently: see appendix C for mappings.

5.8 Copyright

The length-based body weight classification (67670-0) is based on values defined by General Electric's Broselow-Luten system. Implementers will require a license to use this field.

Many fields in this guide use codes from the Systematized Nomenclature of Medicine, Clinical Terms (SNOMED CT), published by the International Healthcare Terminology Standards Development Organization (IHTSDO). IHTSDO has licensed these codes for use in the United States. Implementers will need to acquire a (free) license to use SNOMED CT by agreeing to the UMLS Metathesaurus license, available from the National Library of Medicine (nlm.nih.gov).

Many fields in this guide use codes from the Logical Object Identifiers and Codes (LOINC), published by the Regenstrief Institute. Regenstrief grants permission to users subject to terms of use, available at loinc.org.

5.9 DSTU Period

Two major sources of change are likely to affect this specification in the early months of the DSTU period.

First, the Office of the National Coordinator's Standards & Interoperability program is about to publish the results of the Health Story consolidation project, a project designed to harmonize the efforts of several CDA guides currently in use. Where this guide makes recommendations contrary to the design decisions made herein, we will evaluate the benefit of adhering to the published approach against any deleterious effect on requirements.

Second, we plan to implement this guide in the Open Health Tools' Model Driven Health Tool, which will provide three valuable benefits:

- By providing a framework to build the constraints against existing standards, the tool assures that the guide will not contradict constraints inherited from those standards.
- By maintaining the guide in that framework, the tool makes it easier to maintain against future changes to the specification or to the foundational specifications it follows.
- The tool also generates java classes from the model to support vendors who wish to generate instances of the CDA.

6. EMS Patient Care Report Constraints

Items in this specification that are mandated by the CDA specification are indicated by the [CDA] annotation.

6.1 Header

We adopt the General Header Constraints in order to maximize interoperability. Items in this specification that are mandated by this template are indicated by the [GHC] annotation.

- CONF-1: The header SHALL conform to the General Header Constraints template 2.16.840.1.113883.10.20.22.1.1.

6.1.1 Levels of Conformance

A CDA document may conform at level one, two, or three. A level one document contains a header and an attached copy of a document (a pdf, a scan, etc.). A level two document contains the header and sections, but the sections contain only textual information. A level three document contains structured data.

- **GHC CONF-HP-3 To indicate conformance to Level 1 (which also asserts compliance with all general or non-level-specific constraints), ClinicalDocument/templateId elements MAY be present with the value shown below.**

```
<templateId root='2.16.840.1.113883.10.20.10' /> <!-- conforms to Level 1 guidance -->
```

- **GHC CONF-HP-4 To indicate conformance to Level 2 features (which also asserts compliance with Level 1 requirements and asserts the presence of section codes), ClinicalDocument/templateId elements MAY be present with the value shown below.**

```
<templateId root='2.16.840.1.113883.10.20.20' /> <!-- conforms to Level 2 guidance -->
```

- **GHC CONF-HP-5 To indicate conformance to Level 3 features (which also asserts compliance with Level 2 requirements and the use of CDA entries in some sections), ClinicalDocument/templateId elements MAY be present with the value shown below.**

```
<templateId root='2.16.840.1.113883.10.20.30' /> <!-- conforms to Level 3 guidance -->
```

Within the header, there are relationships to the following:

- Patient (record target): NEMESIS Patient section
- Author: includes both the software system (ERecord.02-04) and the EMS professional who generated the report (EOther.08)
- Custodian: the organization that takes responsibility for maintaining the document; in this case, the EMS agency
- Service Event: the EMS dispatch for the patient
- Encompassing Encounter: usually a longer-term entity than the Service Event (designed to model a hospital stay during which there may be many Service Events). In our case, logically coextensive with the Service Event, but used to represent the EMS unit (as a healthcare facility).

6.1.2 Clinical Document

In a CDA document, the top-level element, also called the document element, is ClinicalDocument, in the urn:hl7-org:v3 namespace.

The examples in this specification assume that this is the default namespace, and accordingly show all elements without a namespace prefix. This IG does not require use of any specific namespace prefix.

Header constraints are expressed in relation to the document element.

The templateId refers to this EMS Patient Care Report specification:

- CONF-2: A ClinicalDocument/templateId element SHALL be present representing conformance to the constraints of this Patient Care Report guide (templateId 2.16.840.1.113883.17.3.10.1).
 - CDA HD: not found
 - NEMESIS: no corresponding element

The typeId refers to the base CDA schema:

- CDA CONF-1: A ClinicalDocument/typeId element SHALL be present having @root = "2.16.840.1.113883.1.3" and @extension = "POCD_HD000040"
 - CDA HD: line 1
 - NEMESIS: no corresponding element

The classCode and moodCode are static for all CDA documents.

- CDA CONF-2: A ClinicalDocument/classCode element SHALL be present where the value is "DOCCLIN" (CodeSystem: 2.16.840.1.113883.5.6 HL7ActClass) STATIC
 - CDA HD: line 2
 - NEMESIS: no corresponding element
- CDA CONF-3: A ClinicalDocument/moodCode element SHALL be present where the value is "EVN" (CodeSystem: 2.16.840.1.113883.5.1001 HL7ActMood) STATIC
 - CDA HD: line 3
 - NEMESIS: no corresponding element

The id element uniquely identifies the document. Because a revised document must have a unique id, but the same "setId" as the original, we recommend the following practice: the setId is a unique identifier for a new document, and version id is always set to "1". The id element is then the setId concatenated with the version id, separated with a period ("."). Example: report 12345 would have setId "12345", version "1", and id "12345.1". That way, subsequent versions can be clearly differentiated from the first.

- CD:A CONF-10: A ClinicalDocument/setId element SHALL be present
 - CDA HD: line 10
 - NEMESIS: ERecord.01
- CONF-3: A ClinicalDocument/versionId element SHOULD be present, having value "1" unless there is a ClinicalDocument/relatedDocument/ParentDocument of typeCode "RPLC"
 - CDA HD: line 11
 - NEMESIS: no corresponding element

- CONF-4: A ClinicalDocument/id element SHALL be present and SHOULD have value equivalent to ClinicalDocument/setId & “.” & ClinicalDocument/versionId
 - CDA HD: line 4
 - NEMESIS: no corresponding element

The code element identifies the document type as an EMS Patient Care Report.

- CONF-5: A ClinicalDocument/code element SHALL be present where the value of @code is 67796-3 EMS Patient Care Report (Code system: 2.16.840.1.113883.6.1 LOINC) STATIC.
 - CDA HD: line 5
 - NEMESIS: no corresponding element

The title element identifies the document as a Patient Care report.

- CDA CONF-6: A ClinicalDocument/title element SHALL be present, and its value SHOULD be “EMS Patient Care Report.”.
 - CDA HD: line 6
 - NEMESIS: no corresponding element

The effective time is for the document, not the encounter.

- CDA CONF-7: A ClinicalDocument/effectiveTime element SHALL be present representing the time of document creation.
 - CDA HD: line 7
 - NEMESIS: no corresponding element
- CDA CONF-8: A ClinicalDocument/confidentialityCode element SHALL be present; the value SHOULD be selected from 2.16.840.1.113883.5.25 (HL7 confidentiality).
 - CDA HD: line 8
 - NEMESIS: no corresponding element
 - Confidentiality defaults to “N,” normal.

Language code represents the language in which the report is written.

- CDA CONF-9: A ClinicalDocument/languageCode element SHALL be present where the value SHALL be selected from 2.16.840.1.113883.1.11.11526 (HL7 HumanLanguage).
 - CDA HD: line 9
 - NEMESIS: no corresponding element
- CONF-7: A ClinicalDocument/languageCode element SHOULD have @code value of “en-US”.
 - CDA HD: line 9
 - NEMESIS: no corresponding element

6.1.3 Patient

The patient is represented in CDA as the subject of the Record Target class.

- CDA CONF-13: A ClinicalDocument/recordTarget element SHALL be present.
 - CDA HD: line 13
 - NEMSIS: no corresponding element
- CDA CONF-14: A ClinicalDocument/recordTarget/typeCode element SHALL be present having value “RCT”.
 - CDA HD: line 14
 - NEMSIS: no corresponding element

The NEMSIS patient id is the social security number. This is expedient for emergency dispatch, but this specification does not require that type of ID. For patient transfers, the patient ID, scoped by an id @root element of the facility, would be appropriate.

NEMESIS collects race and ethnicity in the one-question format (see guidance at http://www.whitehouse.gov/omb/fedreg_1997standards), but the HL7 RIM and, therefore, the CDA schema contain separate elements. It is necessary to populate both CDA fields based on the values selected for the NEMESIS question. Further, the CDA model includes a single race code, in order to support multiple race codes as required by OMB, we adopt a second race code entry from the HL7 SDWG namespace. All documents must populate the CDA race code; if more than one race code is recorded, then the SDWG element may also be populated. No semantic priority is implied by the element selection.

- **CONF-12: A ClinicalDocument/recordTarget/PatientRole/Patient/raceCode element MAY be present. If present it SHALL drawn from 2.16.840.1.113883.6.238 (CDC Race and Ethnicity) DYNAMIC.**

6.1.4 Author

The EMS Patient Care Report is not a hand-written document, but, like the Continuity of Care document, an export of information from an automated system. As a result, the set of authors includes the software used to generate the report as well as the EMS professional who generated the report.

- CDA CONF-71: A ClinicalDocument/author element SHALL be present, having typeCode = "AUT" (code system: 2.16.840.1.113883.5.90 HL7 participation type code) STATIC and contextControlCode="OP" (Code system: 2.16.840.1.113883.1.11.16478 HL7 context control) STATIC.

 - NEMSIS: no corresponding element
- CONF-15: An . . . author/AssignedAuthor/AuthoringDevice/manufacturerModelName element SHALL be present.
 - CDA HD: line 88
 - NEMSIS: ERecord.02

The NEMSIS specification records both software name and version. These are concatenated in the CDA EMS Patient Care Report.

- CONF-16: An . . . author/AssignedAuthor/AuthoringDevice/softwareName element SHALL be present.
 - CDA HD: line 88

- NEMESIS: ERecord.03 & ERecord.04 (version), concatenated with an intervening space

The human author is also included. The name, address, and telecom are taken from the Demographic side of the domain model.

6.4.19 Scene

Scene includes information regarding the location of the incident.

- CONF-257: An EMS Scene section (2.16.840.1.113883.17.3.10.1.8) SHALL have code = 67665-0 EMS Scene (CodeSystem = 2.16.840.1.113883.6.1 LOINC) STATIC
- CONF-201: A scene section SHALL contain an entryRelationship/Observation indicating whether the reporting EMS unit was the first unit on the scene, having code = 67481-2 (CodeSystem = 2.16.840.1.113883.6.1 LOINC) STATIC and Boolean value.
 - NEMSIS EScene.01
- CONF-202: A scene section MAY contain an entryRelationship/Observation naming the first EMS unit on the scene, having code = 67481-2 (CodeSystem = 2.16.840.1.113883.6.1 LOINC) STATIC and text value.
 - NEMSIS EScene.02
- CONF-203: A scene section MAY contain an entryRelationship/Observation indicating the number of patients at the scene, having code = 67489-5 (CodeSystem = 2.16.840.1.113883.6.1 LOINC) STATIC and value drawn from 2.16.840.1.113883.17.3.5.75 Patients at scene (NEMSIS) DYNAMIC.
 - NEMSIS EScene.06
- CONF-204: A scene section MAY contain an entryRelationship/Observation indicating whether the incident is a mass casualty incident, having code = 67490-3 (CodeSystem = 2.16.840.1.113883.6.1 LOINC) STATIC and Boolean value (NEMSIS) DYNAMIC.
 - NEMSIS EScene.07

6.4.20 Situation

Situation includes information that can be used to understand the onset of a problem.

- CONF-258: An EMS Situation section (2.16.840.1.113883.17.3.10.1.9) SHALL have code = 67666-8 (CodeSystem = 2.16.840.1.113883.6.1 LOINC) STATIC.
- CONF-206: A situation section SHALL contain one entryRelationship/Observation describing the chief complaint, having code = 10154-3 (CodeSystem = 2.16.840.1.113883.6.1 LOINC) STATIC and text value.
 - NEMSIS ESituation.04
- CONF-208: A complaint observation SHALL have an entryRelationship/Observation describing the duration of the complaint, having code = 67491-1 (CodeSystem = 2.16.840.1.113883.6.1 LOINC) STATIC and a PQ value.
 - NEMSIS ESituation.05, 06
 - See appendix C for NEMSIS mappings to UCUM units
- CONF-209: A chief complaint observation SHALL have an effectiveTime.low specifying the onset time of the complaint.
 - NEMSIS ESituation.01
- CONF-210: A chief complaint observation SHALL have an entryRelationship/Observation indicating whether the complaint is due to an injury, having code = 69467-9 (CodeSystem = 2.16.840.1.113883.6.1 LOINC) STATIC and a Boolean value, nullable.
 - NEMSIS ESituation.02
- CONF-211: A chief complaint observation SHALL have a targetSiteCode describing the anatomical location of the complaint, having value drawn from 2.16.840.1.113883.17.3.5.76 Chief complaint site (NEMSIS) DYNAMIC.
 - NEMSIS ESituation.07

- CONF-212: A chief complaint observation SHALL have an entryRelationship/Observation describing the organ system of the complaint, having code = 69468-7 (CodeSystem = 2.16.840.1.113883.6.1 LOINC) STATIC and value drawn from 2.16.840.1.113883.17.3.5.77 Chief complaint system (NEMESIS) DYNAMIC.
 - NEMESIS ESituation.08
- CONF-213: A chief complaint observation SHALL have an entryRelationship/Observation describing the EMS professional's impression of the complaint, having code = 67492-9 (CodeSystem = 2.16.840.1.113883.6.1 LOINC) STATIC and value drawn from ICD-10 CM (CodeSystem = 2.16.840.1.113883.6.90) DYNAMIC.
 - NEMESIS ESituation.11
- CONF-214: A chief complaint observation SHALL have an entryRelationship/Observation describing the primary symptom of the complaint, having code = 67774-0 (CodeSystem = 2.16.840.1.113883.6.1 LOINC) STATIC and value drawn from ICD-10 CM (CodeSystem = 2.16.840.1.113883.6.90) DYNAMIC.
 - NEMESIS ESituation.09
- CONF-215: A chief complaint observation MAY have one or more entryRelationship/Observations describing other symptoms of the complaint, having code = 67776-5 (CodeSystem = 2.16.840.1.113883.6.1 LOINC) STATIC and value drawn from ICD-10 CM (CodeSystem = 2.16.840.1.113883.6.90) DYNAMIC.
 - NEMESIS ESituation.10
- CONF-216: A complaint observation other than the chief complaint MAY have one or more entryRelationship/Observations describing the EMS professional's impression of the complaint, having code = EMSTEMPCL_39 (CodeSystem = 2.16.840.1.113883.6.1 LOINC) STATIC and value drawn from ICD-10 CM (CodeSystem = 2.16.840.1.113883.6.90) DYNAMIC.
 - NEMESIS ESituation.12
- CONF-217: A situation section SHALL have an entryRelationship/Observation indicating the condition of the patient on the unit's arrival at the scene, having code 67493-7 (CodeSystem = 2.16.840.1.113883.6.1 LOINC) STATIC and value drawn from 2.16.840.1.113883.17.3.5.78 Triage status (NEMESIS) DYNAMIC.
