

IPS Face 2 Face meeting

@Phast

2017-03-22

9.15 - 10.30

Notes in red

Notes

- Include in the functional area that no assumption on transport has been made...
- PS comes from one source, and covers different cases.
- Specify, how the provenance could be managed (without going into details) to be included in next versions.
- To be further discussed, in any case add a paragraph in which explain the problem and how it might be faced.

Agenda

- Negations, Known Absent and No data available
 - Follow up of the discussion
 - Definition of the codes to be used for the identified sections
- Pattern for conditions (usage of "ASSERTION")
 - Follow up of the discussion
- Examples applied to the different sections

Negations, Known Absent and No data available

- http://wiki.hl7.org/index.php?title=IPS_NoInfos_section
- The information about the absence of information should be conveyed through the coded element that also conveys the main information (e.g. the type of allergy) (decision of the 2017-02-22 call)

To Do

- Identify possible candidate codes for the « no data » and «known absent» cases....
- Consolidate the pattern for conditions...
- ...build examples for the different cases....

Negations, Known Absent and No data available

- How to handle “no relevant problem or medications” ?
- No additional category, this could be determined by the context.
- Explain in the text this concept

Negations, Known Absent and No data available

- Consider NKA and children
- Rob will follow up the creation of the HL7 Int extension
- Only 182849000 | No drug therapy prescribed (situation)

Negations, Known Absent and No data available

- Consider NKA and children
- Rob will follow up the creation of the HL7 Int extension
- Create a new code “No drug treatment” (Situation) (No medications synonyms)
- Create «Drug treatment unknown» (Situation)

Negations, Known Absent and No data available

- Create “Problems unknown” (Situation)
- Create “History of Procedures unknown” (Situation)

- Immunization
 - Known absent => 401179006 No previous immunizations (situation)
 - Create «Immunization history unknown» (Situation)

To Do

- Identify possible candidate codes for the « no data » and «known absent» cases....
- Consolidate the pattern for conditions...
- ...build examples for the different cases....

-
- Preferred way => type in the Observation.code and the substance in the agent participant.
 - No value in this case
 - Allow for observation value if the substance is not known to convey pre-coordinated disorder.
 - In this case no agent

Conditions pattern

- See
