“Reducing Clinician Burden” Project

Health Level Seven (HL7)
Electronic Health Record Work Group (EHR WG)

1 June 2020
Moral Injury?
Clash of Clinical and Business Models?

- “[Clinicians know] how best to care for their patients but [are] blocked from doing so by systemic barriers related to the business side of health care.”

– Washington Post: “Too many tests, too little time: Doctors say they face ‘moral injury’ because of a business model that interferes with patient care” – 1 February 2020
Quantifying the EHR Burden

Surveys Say...

- 3 out of 4 physicians believe that EHRs increase practice costs, outweighing any efficiency savings – Deloitte Survey of US Physicians, 2016
- 7 out of 10 physicians think that EHRs reduce their productivity – Deloitte
- 4 in 10 primary care physicians (40%) believe there are more challenges with EHRs than benefits – Stanford Medicine/Harris Poll, 2018
- 7 out of 10 physicians (71%) agree that EHRs greatly contribute to physician burnout – Stanford/Harris
- 6 out of 10 physicians (59%) think EHRs need a complete overhaul – Stanford/Harris
- Only 8% say the primary value of their EHR is clinically related – Stanford/Harris
- [Physicians express that EHR] systems had detracted from professional satisfaction (54%) as well as from their clinical effectiveness (49%) – Stanford/Harris
"No other industry... has been under a universal mandate to adopt a new technology before its effects are fully understood, and before the technology has reached a level of usability that is acceptable to its core users." — New England Journal of Medicine, Transitional Chaos or Enduring Harm? The EHR and the Disruption of Medicine, 22 Oct 2015

"Many clinicians know what they want — but haven't been asked... Our biggest mistake lies not in adopting clunky systems but in dismissing the concerns of the people who must use them." — Ibid.

“Few physicians and nurses were involved in the decision-making process of which EHR to implement in their workplace. Of physician participants, 66 percent said they had no input, 28 percent had input... Of nurse and [advance practice nurse] participants, 80 percent said they had no input, 18 percent had input...” — Becker's Healthcare - [Survey finds] Nearly half of physicians think EHRs have decreased quality of care, 1 May 2019

"Of the physician and nurse/APRN participants who had input in choosing their workplace's EHR system, just 2 percent said the system they wanted was chosen." — Ibid.
“Although the original intent behind the design of EHRs was to facilitate patient management and care, the technology largely has been co-opted for other purposes.

- **Payers** see the EHR as the source of billing documentation.
- **Health care enterprises** see it as a tool for enforcing compliance with organizational directives.
- **The legal system sees** the EHR as a statement of legal facts.
- **Public health entities** see it as a way to use clinicians to collect their data at drastically reduced costs.
- **Measurement entities** see the EHR as a way to automate the collection of measure data, reducing their reliance on chart abstraction.
- **Governmental entities** see it as a way to observe and enforce compliance with regulations.

“All these impositions on EHR systems have created distractions from their potential value in supporting care delivery... The ability of these systems to support care delivery will not improve unless physicians and others who deliver care insist that the functions needed by clinicians and their patients take priority over non-clinical requirements.”

— American College of Physicians, Putting Patients First by Reducing Administrative Tasks... 2 May 2017
Based on Mandates of...

### Reducing Clinician Burden

#### Defining Terms

| Clinician Burden | Anything that hinders patient care, either directly or indirectly, such as: 1) Undue cost or loss of revenue, 2) Undue time, 3) Undue effort, 4) Undue complexity of workflow, 5) Undue cognitive burden, 6) Uncertain quality/reliability of data/record content, 7) Anything that contributes to burnout, lack of productivity, inefficiency, etc., 8) Anything that gets in the way of a productive clinician-patient relationship. -- Peter Goldschmidt, modified |

---
Average characters per ambulatory progress note in U.S. and international health systems.

Reducing Clinician Burden

Burden Can Lead to Burnout

- “Physician burnout’ has skyrocketed to the top of the agenda in medicine. A 2018 Merritt Hawkins survey found a staggering 78% of doctors suffered symptoms of burnout, and [recently] the Harvard School of Public Health and other institutions deemed it a ‘public health crisis.’”

From: Physician stress and burnout: the impact of health information technology
From: Physician stress and burnout: the impact of health information technology
What Contributes Most to Burnout?

- Too many bureaucratic tasks (e.g., charting, paperwork) 55%
- Spending too many hours at work 33%
- Lack of respect from administrators, employers, colleagues, or staff 32%
- Increasing computerization of practice (EHRs) 30%
- Insufficient compensation, reimbursement 29%
- Lack of control, autonomy 24%
- Feeling like a cog in a wheel 22%
- Decreasing reimbursements 19%
- Lack of respect from patients 17%
- Government regulations 16%
- Other 7%

Reducing Clinician Burden Project
Overview

- As of late 2018, “Reducing Clinician Burden” is a formal project of the HL7 EHR Work Group
- Is open and collaborative – oriented to US and international interests
- Primary focus is on *clinician burden including time & data quality burdens* associated with:
  - Use/engagement of EHR/HIT systems
  - Capture, exchange and use of health information
- Considering:
  - Clinical practice – at the point of care
  - Regulatory, accreditation, administrative, payor, public health mandates
  - EHR/HIT system design, functionality, usability and implementation
  - Data quality and usability
- Have undertaken an extensive review of reference sources *to document the substance, impact and extent of clinician burden*
  - Trade publications, professional society journals, articles, studies, personal experience

© Health Level Seven and HL7 are registered trademarks of Health Level Seven International, registered with the United States Patent and Trademark Office.
Reduction Clinician Burden Project
Assessing the Burden

- Continuing work to identify root causes in each RCB topic area (not limited to EHR system functionality and usability issues - although that is important)
  - What is the problem and its source?
  - Why did it happen?
  - What will be done to prevent it from happening (now and in the future)?
  - Who (stakeholder(s)) might best address burden?

- Developing focused White Paper: “Reducing Clinician Burden by Improving Electronic Health Record Usability and Support for Clinical Workflow”

- Looking for success stories specifically addressing burden reduction and burnout

- Expect to influence future directions for HL7, ISO TC215 and other standards development efforts

- Goal is not to boil the ocean, rather to understand the substance, extent and impact of the burden, to recognize root causes and to identify success stories.
Reducing Clinician Burden – Breaking It Down

Topics/Categories

1) Clinician Burden – In General
2) Patient Safety (and Clinical Integrity)
3) Administrative tasks
4) Data entry requirements
5) Data entry scribes and proxies
6) Clinical documentation: quality and usability
7) Prior authorization, coverage verification, eligibility tasks
8) Provider/patient face to face interaction
9) Provider/patient communication
10) Care coordination, team-based care
11) Clinical work flow
12) Disease management, care and treatment plans
13) Clinical decision support, medical logic, artificial intelligence
14) Alerts, reminders, notifications, inbox management
15) Information overload
16) Transitions of care
17) Health information exchange, claimed "interoperability"
18) Medical/personal device integration
19) Orders for equipment and supplies
20) Support for payment, claims and reimbursement
21) Support for cost review
22) Support for measures: administrative, operations, quality, performance, productivity, cost, utilization
23) Support for public and population health
24) Legal aspects and risks
25) User training, user proficiency
26) Common function, information and process models
27) Software development and improvement priorities, end-user feedback
28) Product transparency
29) Product modularity
30) Lock-in, data liquidity, switching costs
31) Financial burden
32) Security
33) Professional credentialing
34) Identity matching and management
35) Data quality and integrity
36) Process integrity
37) List Management (problems, medications, immunizations, allergies, surgeries, interventions and procedures)

Blue = Focus Teams Formed
Reducing Clinician Burden Project

Focus Teams

- Clinical documentation, quality and usability
  - Lead: Dr. Lisa Masson (lisa.masson@cshs.org)

- Clinical decision support, medical logic, artificial intelligence + Alerts, reminders, notifications, inbox management + Information overload
  - Lead: Dr. James McClay (jmclay@unmc.edu)

- Clinical workflow
  - Lead: Dr. David Schlossman (dschloss39@gmail.com)

- Legal aspects and risks
  - Lead: Dr. Barry Newman (barrynewman@earthlink.net)

- System lock-in, data liquidity, switching costs
  - Lead: Dr. Michael Brody (mbrody@tldsystems.com)

- State of data content quality
  - Leads: Dr. Reed Gelzer (r.gelzer@trustworthyehr.com)
Reducing Clinician Burden

Success Stories

1. **Reducing Clinician Burden: Cardiovascular Procedure Reporting at Duke**
   James Tcheng MD, Duke University

2. **"Home for Dinner" - Reducing After Hours Documentation with Focused Training**
   Greta Branford MD, University of Michigan

3. **Benefits of SNOMED CT from a clinical perspective, The Rotherham experience**
   Monica Jones, NHS Rotherham Foundation Trust (UK)

4. **Getting Time Back in Your Day! Implementing a Multi-Faceted Approach to Optimizing Epic in the Ambulatory Setting**
   Jeff Tokazewski MD, Carole Rosen, Shane Thomas, University of Pennsylvania

5. **Well-Being Playbook, A Guide for Hospital and Health System Leaders**
   Elisa Arespacochaga, American Hospital Association
Reducing Clinician Burden

Success Stories

6. **Understanding the Impact of the EHR on Physician Burnout and Wellness**
   Christopher Sharp MD, Lindsay Stevens MD, Stanford University/Stanford Health Care

7. **SPRINT – An Organizational Strategy that Increases Satisfaction, Improves Teamwork and Reduces Burnout**
   Amber Sieja MD, University of Colorado School of Medicine, UCHealth

[More to come...]
Reducing Clinician Burden
New ISO TC215 WG1 Work Item

- ISO TC215 – Health Informatics, formed in 1999
  - Chair: Michael Glickman (US)

- Working Group 1 – Frameworks, Models and Architectures
  - Convenor: Björn-Erik Erlandsson (Sweden)

- ISO 4419 – Preliminary Work Item focused on Reducing Clinician Burden
  - Targeted as an Informative Technical Report

- Candidate: RCB Root Cause Analysis
  - Developed by HL7 RCB Project Team
  - With US and International Input
  - Promoted from HL7 to ISO under Partner Standards Development Organization (PSDO) Agreement (currently being formalized)
  - Ultimately – Published by HL7 and ISO
2019 USE CASE INVENTORY & STATUS

PROJECT PROCESS
Define requirements (technical, business and testing)
- Create Implementation Guide
- Create and test Reference Implementation (prove the guide works)
- Pilot the solution
- Deploy the solution

Reducing Clinician Burden Project

Some Standards Focused on Burden

- HL7 Da Vinci Project – Provider ↔ Payer Communication
  - Coverage Determination
  - Pre Authorization
  - and more...

- HL7 EHR System Usability Functional Profile
  - Functions and Conformance Criteria to Enhance System Usability
  - In preparation for publication

- ISO/HL7 10781 EHR System Functional Model, Release 3
  - In early design/development stage
Reducing Clinician Burden Project

Materials

- Project Documents – Project Website
  - Project Overview, Presentations
  - DRAFT RCB Analysis Worksheet
  - DRAFT RCB Comments related to Patient Summaries
  - Reference Sources
  - Success Stories
Reducing Clinician Burden Project

Schedule

- **Teleconferences, Monday at 3PM ET (US/Canada)**
  - 1st and 3rd Mondays each month
    1 and 15 June 2020, 6 and 20 July...
  - [https://global.gotomeeting.com/meeting/join/798931918](https://global.gotomeeting.com/meeting/join/798931918)

- **Upcoming Virtual Meetings**
  - HL7 Plenary and Working Group, Sep 2020
  - ISO TC215, Oct 2020
