

HL7 V3 User Model

The V3 Editing Team

April 9, 2007

Contents

- Profile orientation
- Profile drafts
- Use case drafts
- Document map prototypes

DRAFT

The need for profiles

- Documents require objectives
 - For the writer to spend time efficiently
 - For the reader to identify the correct document
 - For HL7 to confirm coverage
- Profiles imply objectives
 - Groups of similar users allow us to create a finite set of objectives that will serve most needs

Profile Guidelines

- How many?
 - Enough to differentiate without clutter. Candidate Profiles without significant differences should be collapsed.
- How much detail?
 - Enough to understand basic needs and the documents that will meet them.
- How do we confirm?
 - Vet with representatives from publishing & education. Expose on Wiki. Review with end users.
- How do we use?
 - Add targeted profile to each document's "objectives" section for writer guidance and reader identification.

Types of Users

- Standards Influencers
 - Specify requirements for standards
 - Sponsor, Voter
- Standards Developers
 - Create standards
 - Developer, Methodologist
- Software Implementers
 - Implement standards in software
 - Software Business Representative, Software Implementer
- Standards Users
 - Use standards for messaging
 - Implementer Business Representative, Implementer

Existing Profile Documents

- Package Note to Readers, “Getting Started”
 - Useful source of real-world needs
 - Requires systematic review & rationalization
- Publication Facilitator’s Guide
 - 9.2.3 preface specification 1: Notes or 4: Prerequisites, Assumptions and Conventions
- Document Introductions
 - “Document Purpose” content varies

“Getting Started” Profiles

- Profiles from ballot:

New implementer →

Manager →

Project manager →

Marketer →

Site agreement constructor

Deal signer →

Interface analyst →

Interface programmer →

Standards Developer →

- Proposed profiles:

= Implementer

= Business representative

= Implementer

= Sponsor

= Implementer Business Rep

= Implementer Business Rep

= Implementer

= Implementer

= Standards Developer

Profile Stage: Novice

- A novice is not a profile but a stage
- A novice business user may remain a novice
- An implementer or developer begins as a novice but then specializes
 - Objectives
 - Understand V3 objectives and principles
 - Understand costs and benefits
 - Understand where to go for more information of a specific type

Standards Influencer: Sponsor

- A director or partner who has invested or may invest in standards development
- Objectives
 - Understand impact of standards change on business strategy and operations
 - Cause, modify, or prevent specific changes
 - Scope of concern may be limited to selected issues

A standards influencer will only want to understand the V3 standards development process well enough to provide input appropriately.

Standards Influencer: Voter

- An analyst or architect with an interest in the design of a standard
- Objectives
 - Understand selected issues and standards at the implementation level
 - Be able to provide substantive feedback on ballot items

A standards influencer will only want to understand the V3 standards development process well enough to provide input appropriately.

Standards Development: Developer

- A person participating in the creation or modification of V3 standards
- Objectives
 - Understand the development process in detail
 - Understand touchpoints among the domains and committees
 - Answer virtually any question

A standards developer must understand the V3 standards development process in depth.

Standards Development: Methodologist

- A person who defines the processes standards developers follow
- Objectives
 - Confirm details and agreements concerning process, artifacts, and tools
 - Understand the process for modifying the methodology

A standards developer must understand the V3 standards development process in depth.

Software Implementation: Software Business Representative

- A manager who may want to evaluate the usefulness of HL7 for a software product, whether to adopt or discontinue
- Objectives
 - Understand benefits of V3
 - Understand conformance costs
 - Understand steps to implement

A standards Implementer may not invest the effort necessary to understand the V3 standards development process.

Software Implementation: Software Implementer

- A person responsible for making a standard work in a software product (analyst, architect, project manager, programmer)
- Objectives
 - Understand how to implement a specific standard
 - Understand conformance in detail
 - Answer specific questions about the standard

A standards implementer will not invest the effort necessary to understand the V3 standards development process.

Standards Implementer: Implementer Business Representative

- A manager who may want to evaluate the usefulness of HL7 for a payor or clinical institution
 - Objectives
 - Understand benefits of V3
 - Understand steps to implement
- A standards user may not invest the effort necessary to understand the V3 standards development process or artifacts.

Standards Implementer: Implementer

- A person responsible for making a standard work in a working implementation (analyst, architect, project manager, programmer)
- Objectives
 - Understand how to implement a specific standard
 - Answer specific questions about the standard

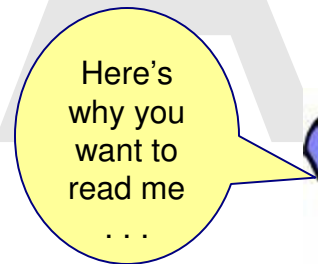

A standards user may not invest the effort necessary to understand the V3 standards development process or artifacts.

Navigating The Documentation

- Readers follow typical profile paths—Use Cases
- Document Map defines path
- Documents confirm appropriateness

which document?

which domain?

- Domain Map clarifies semantic context

Use Cases Are

- Scenarios
- Specific to profile types
- Sets of specific steps to consult documents

DRAFT

Use Cases: Influencers

- Standards Influencer
 - Evaluate conceptual overlap
 - Evaluate an opportunity (i.e. a gap)
- Voter
 - Evaluate a ballot change to a specification

Use Cases: Developer

- Standards Developer
 - Evaluate conceptual overlap
 - Create a standard
 - Modify a standard
- Methodologist
 - Evaluate conformance of a standard

Use Cases: Software

- Software Business Representative
 - Evaluate V3 for adoption
 - Evaluate a change for adoption
- Software Implementer
 - Evaluate V3 for adoption
 - Evaluate a change for adoption
 - Support a standard

Use Cases: Implementers

- Implementer Business Representative
 - Evaluate V3 for adoption
 - Evaluate a change for adoption
- Implementer
 - Evaluate V3 for adoption
 - Evaluate a change for adoption
 - Implement a standard

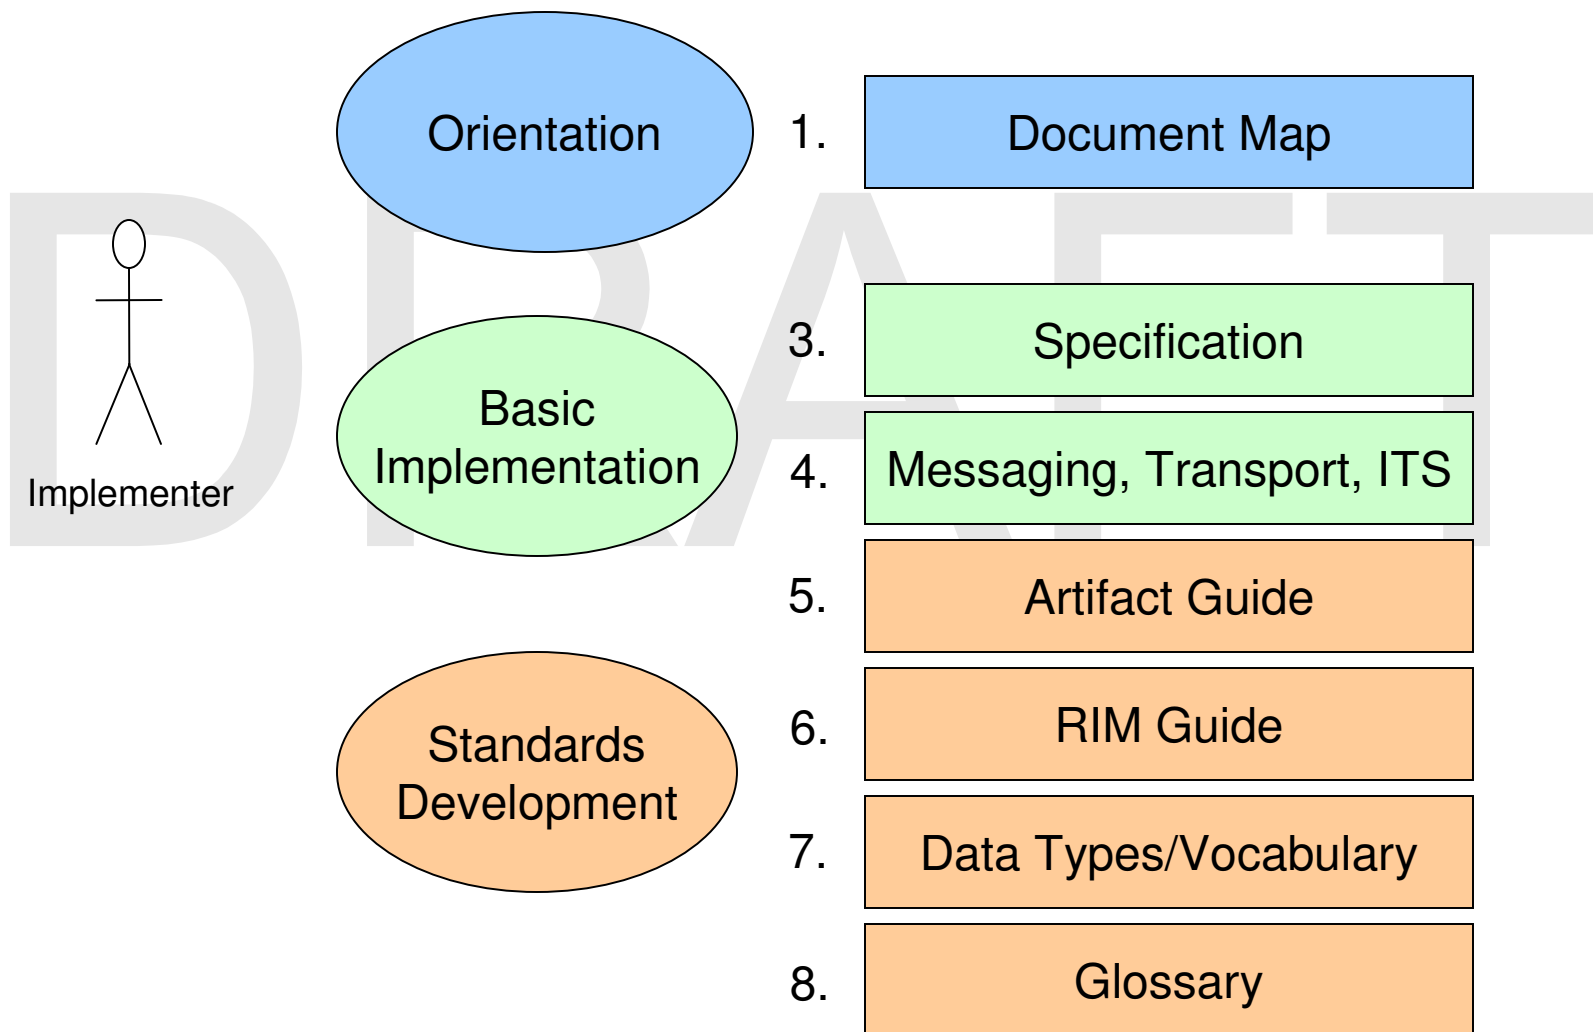

Use Case

Business Representative evaluates V3 for adoption

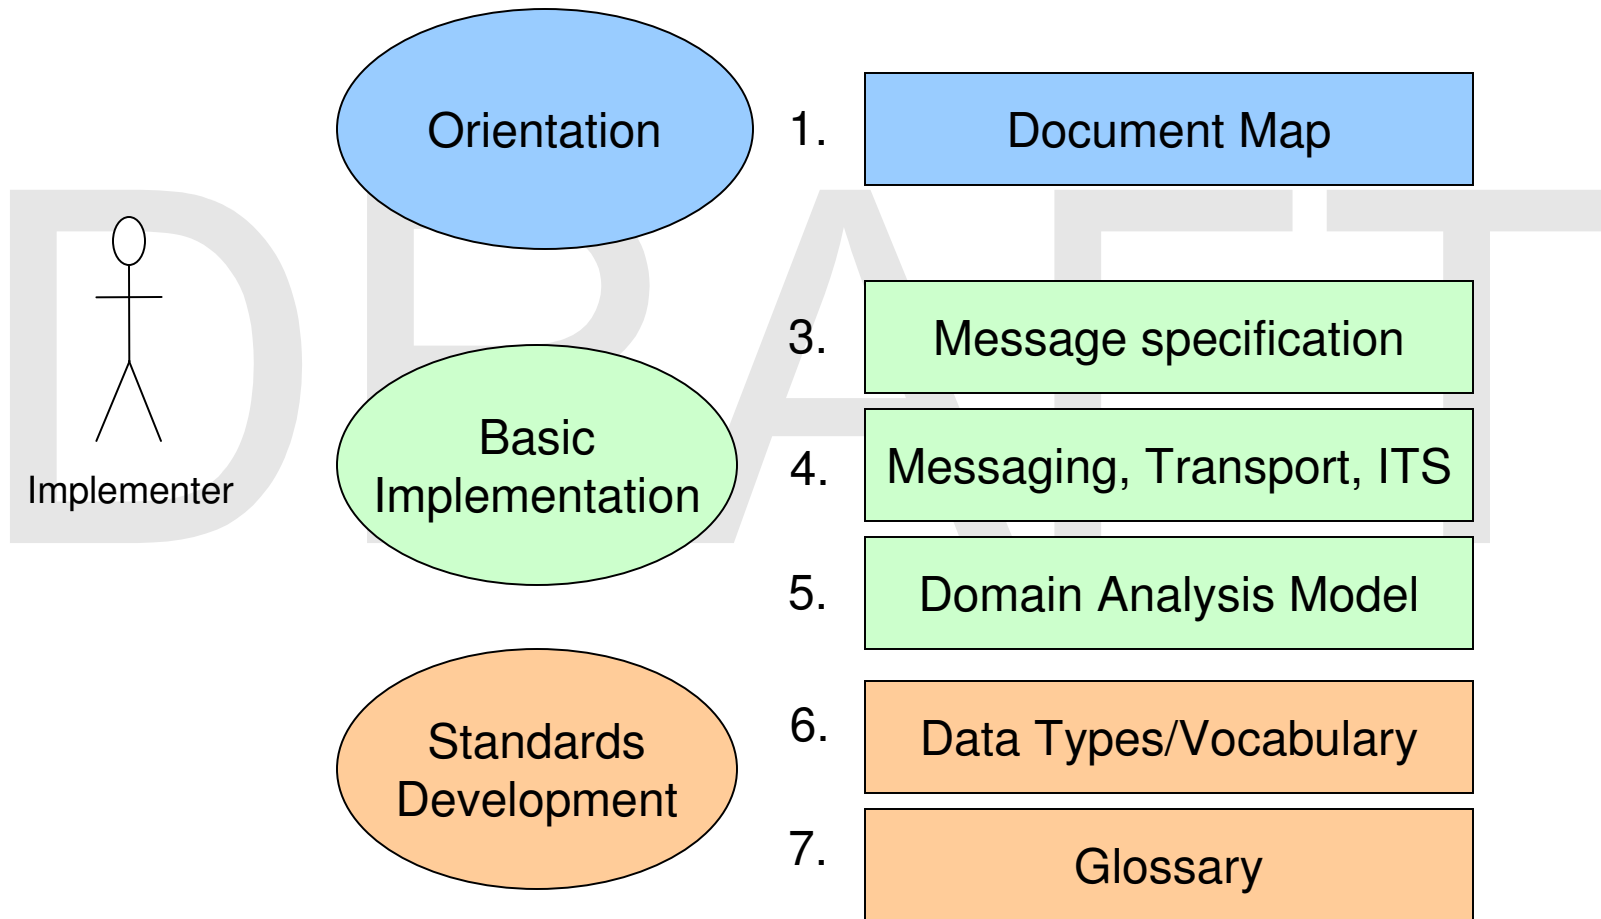

Use Case

Implementer evaluates V3 for adoption

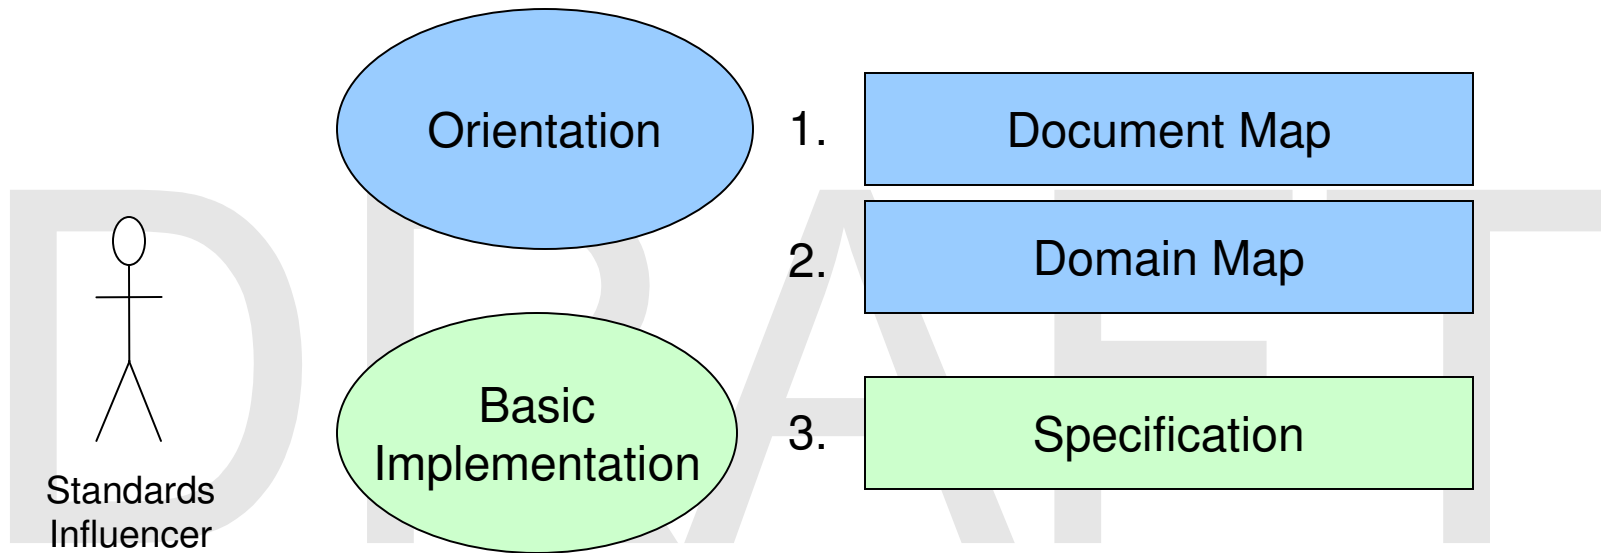

Use Case

Implementer implements a message

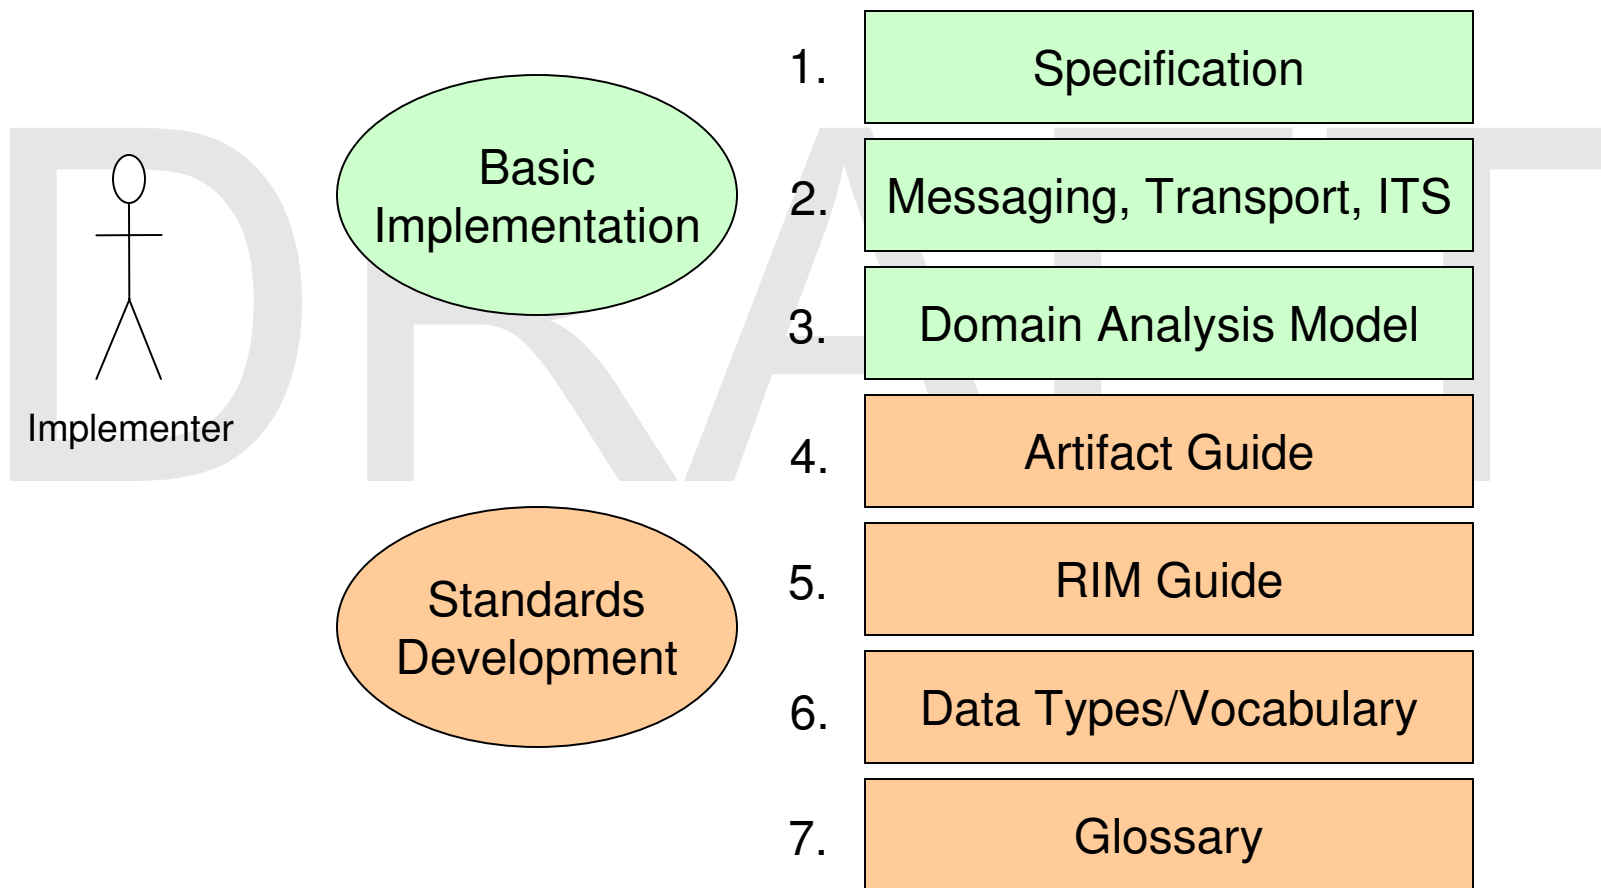

Use Case

Standards Influencer identifies conceptual overlap

Use Case

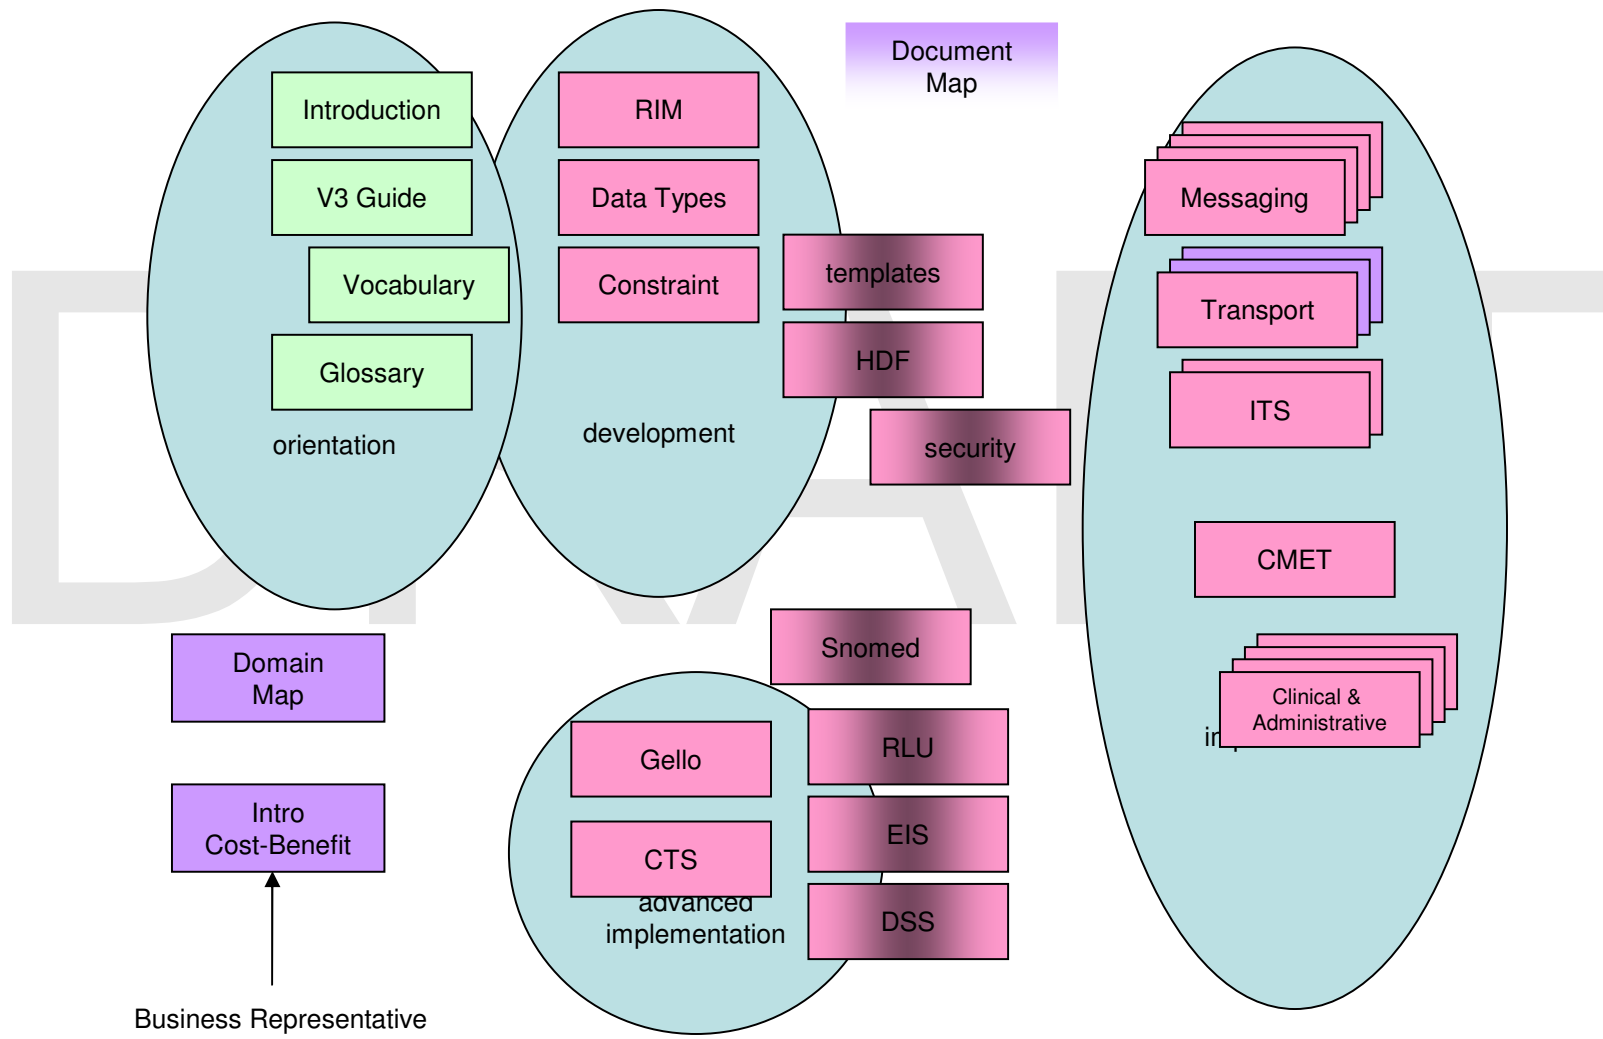

Voter assesses a ballot change to a specification

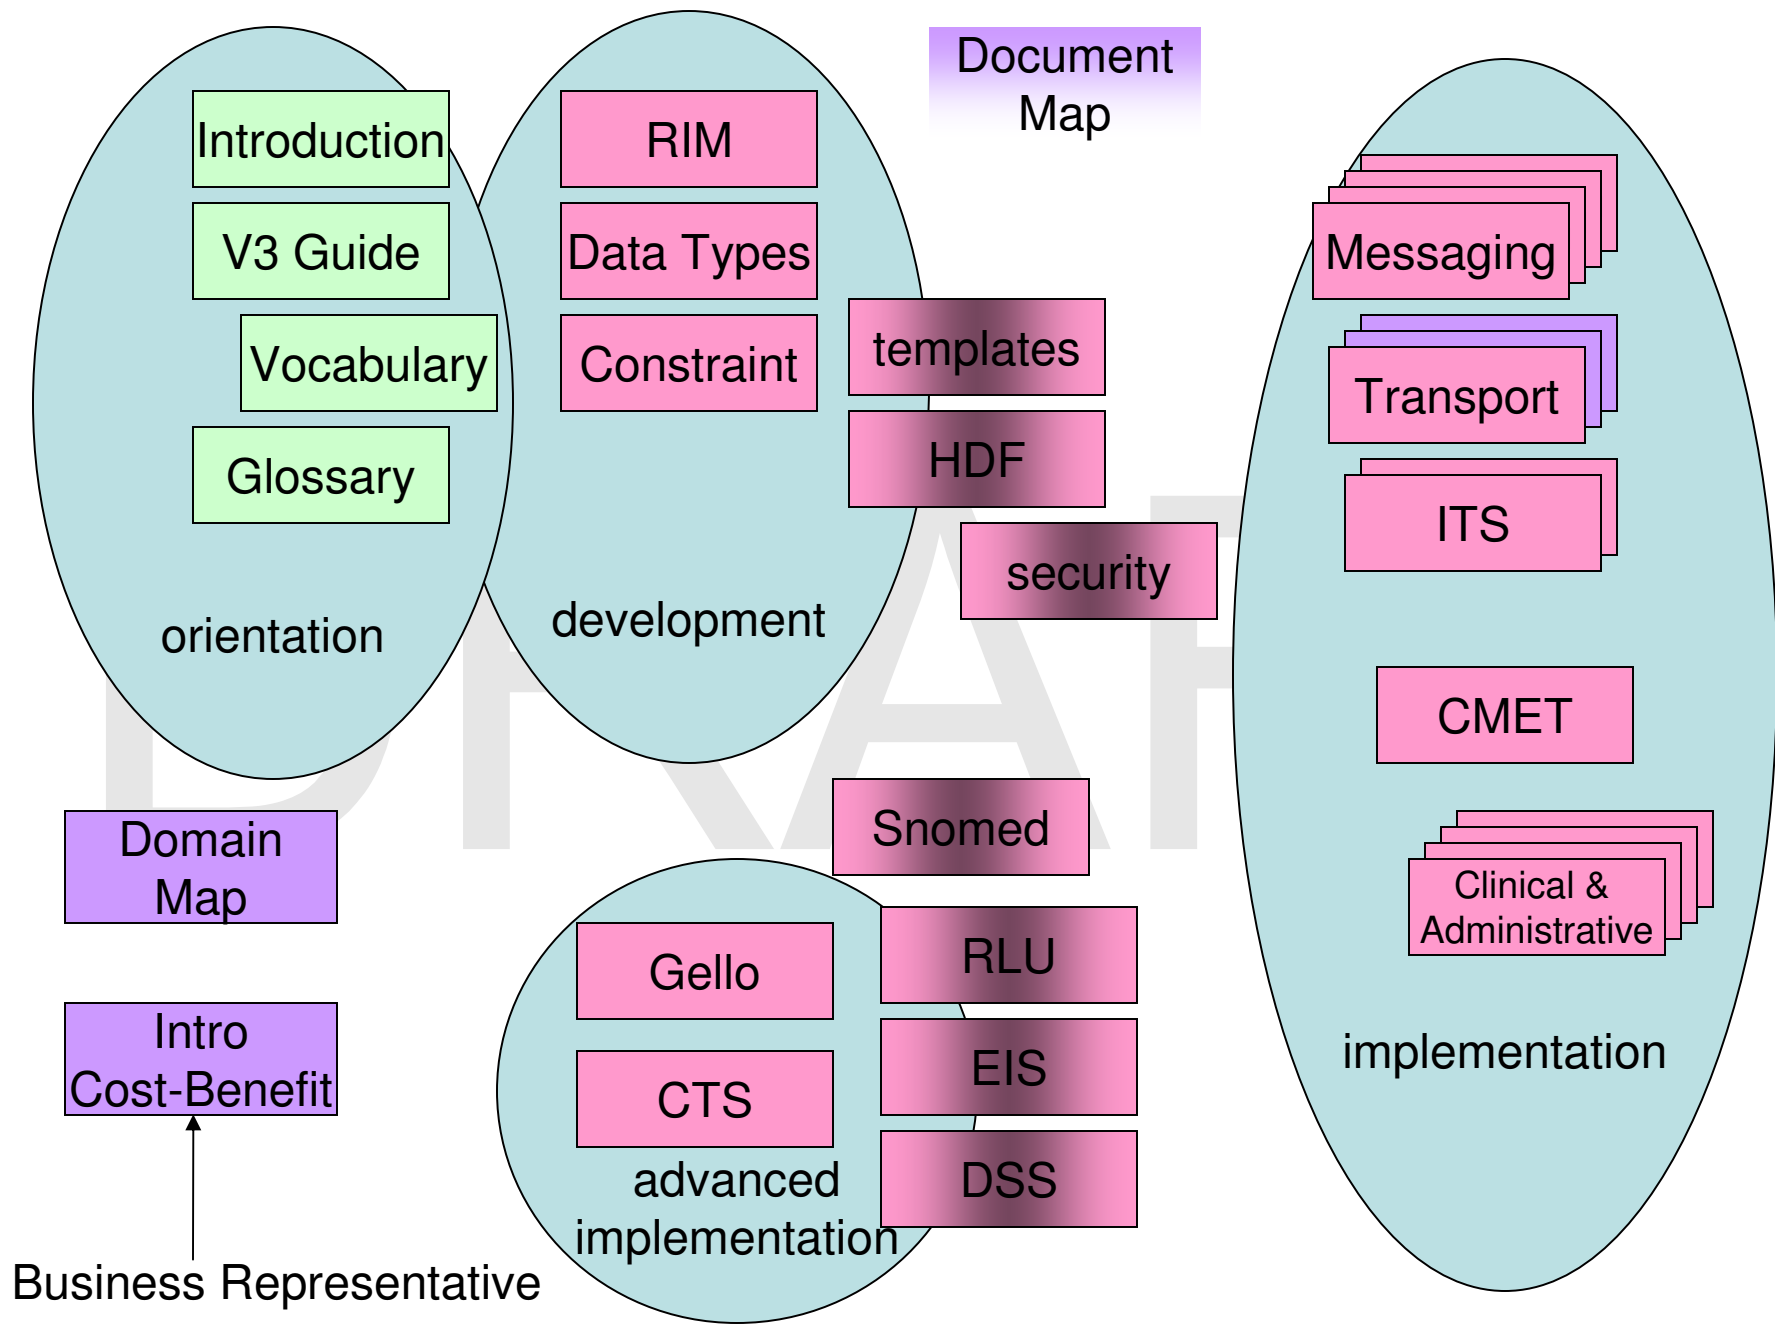

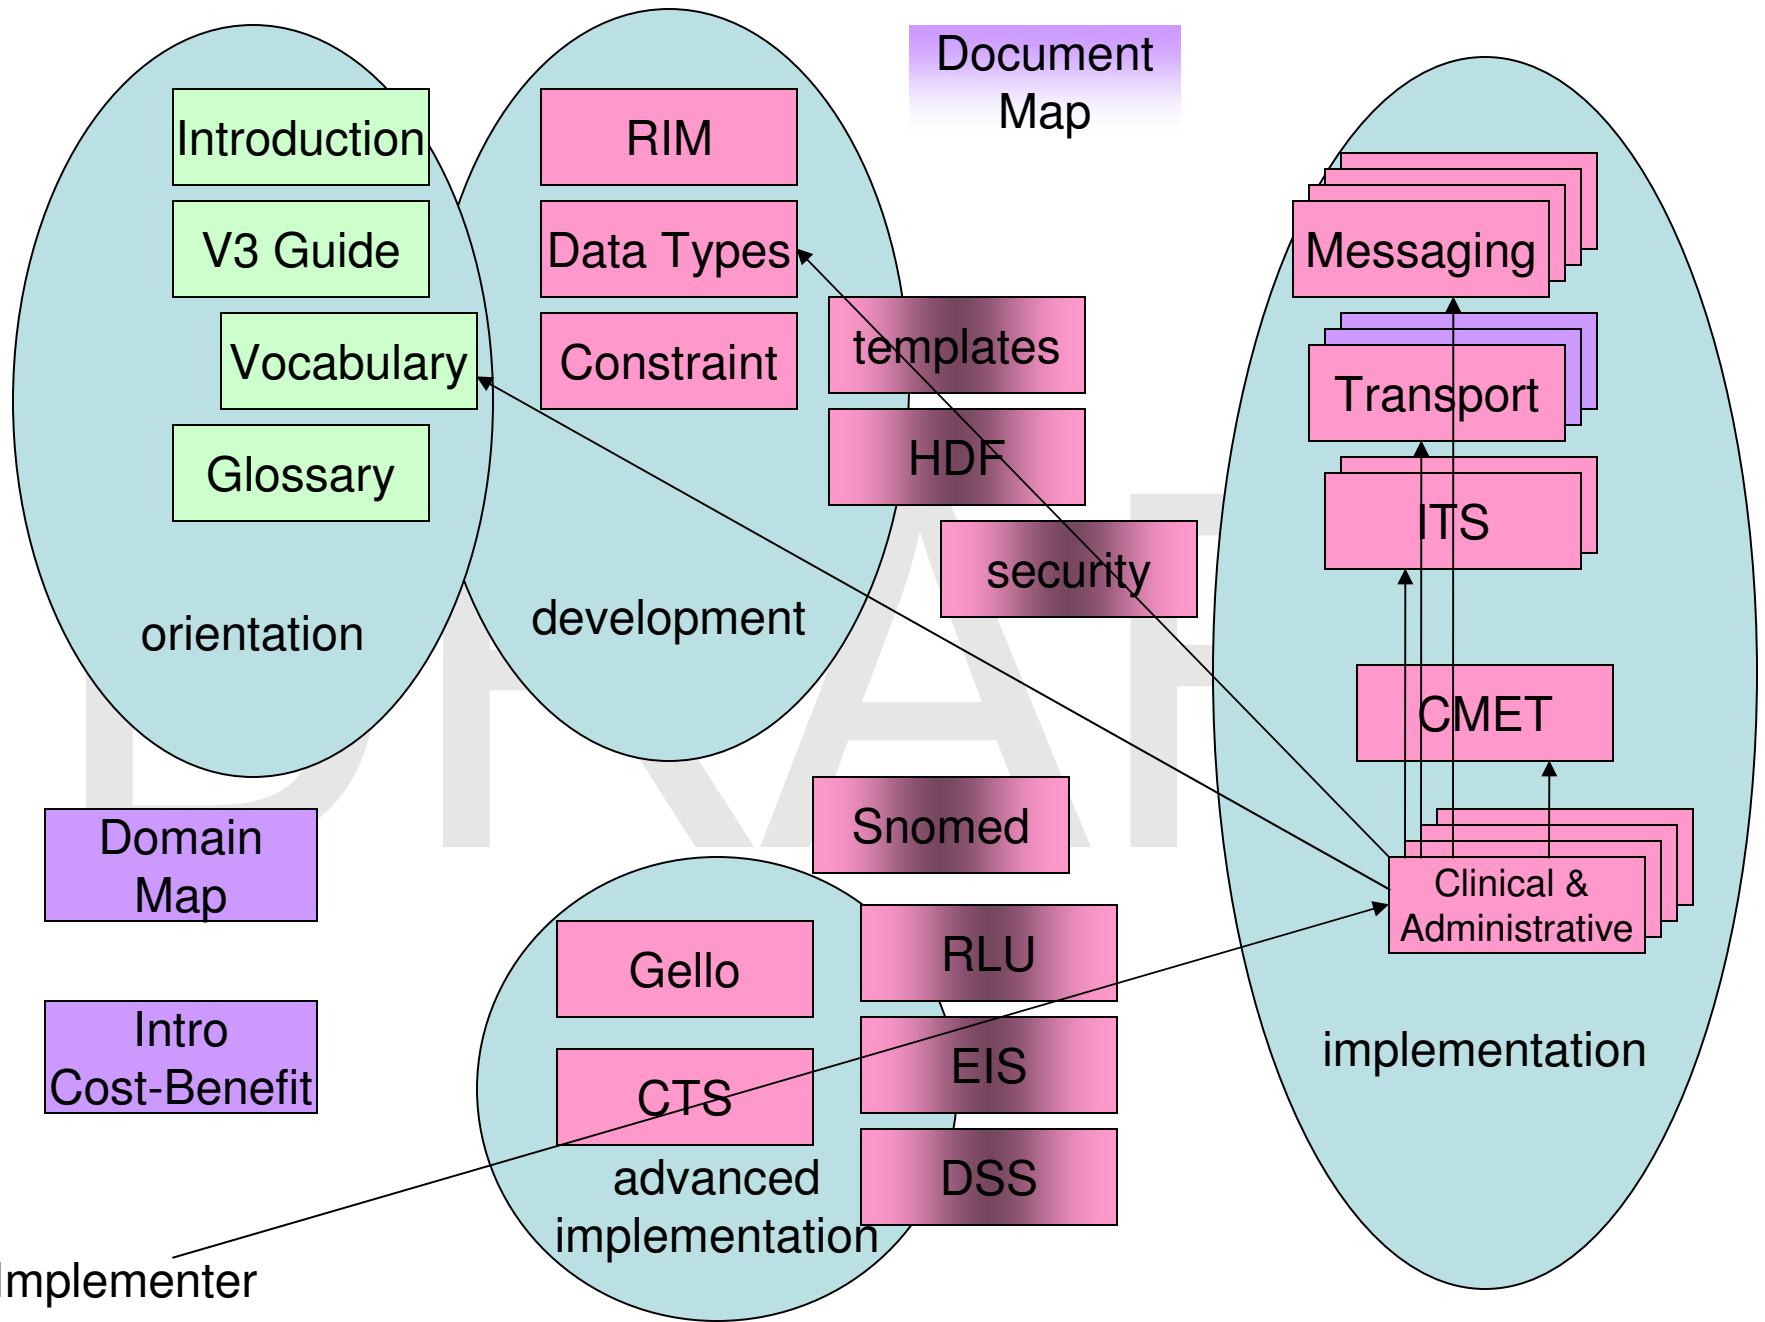

Document Maps

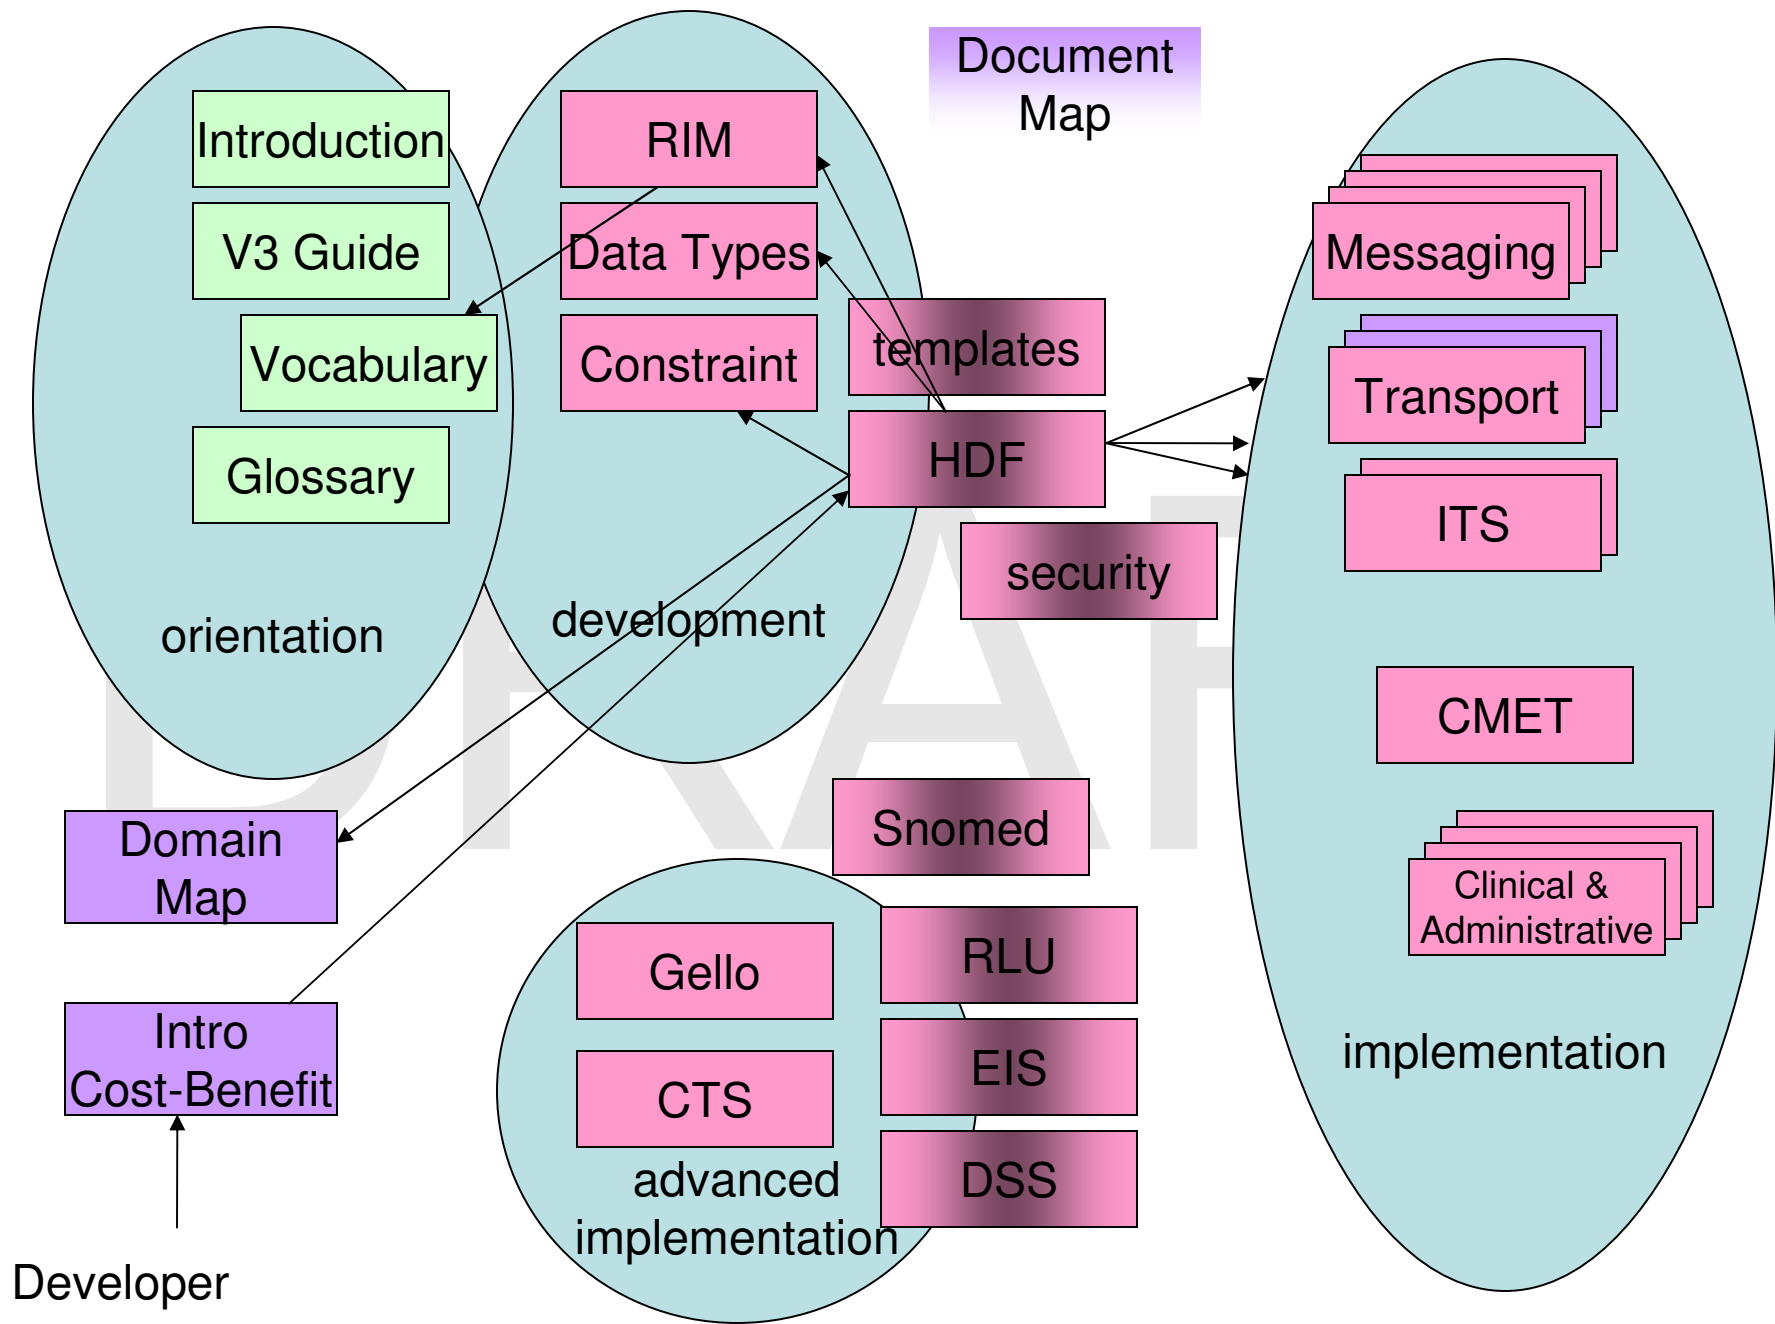

- Concept 1
 - Represents messy reality
 - Provides a map for path, in context
- Concept 2
 - Aligns documents along 2 dimensions
 - Cleaner, but may be harder to draw paths
- Concept 3
 - Maximally simplified

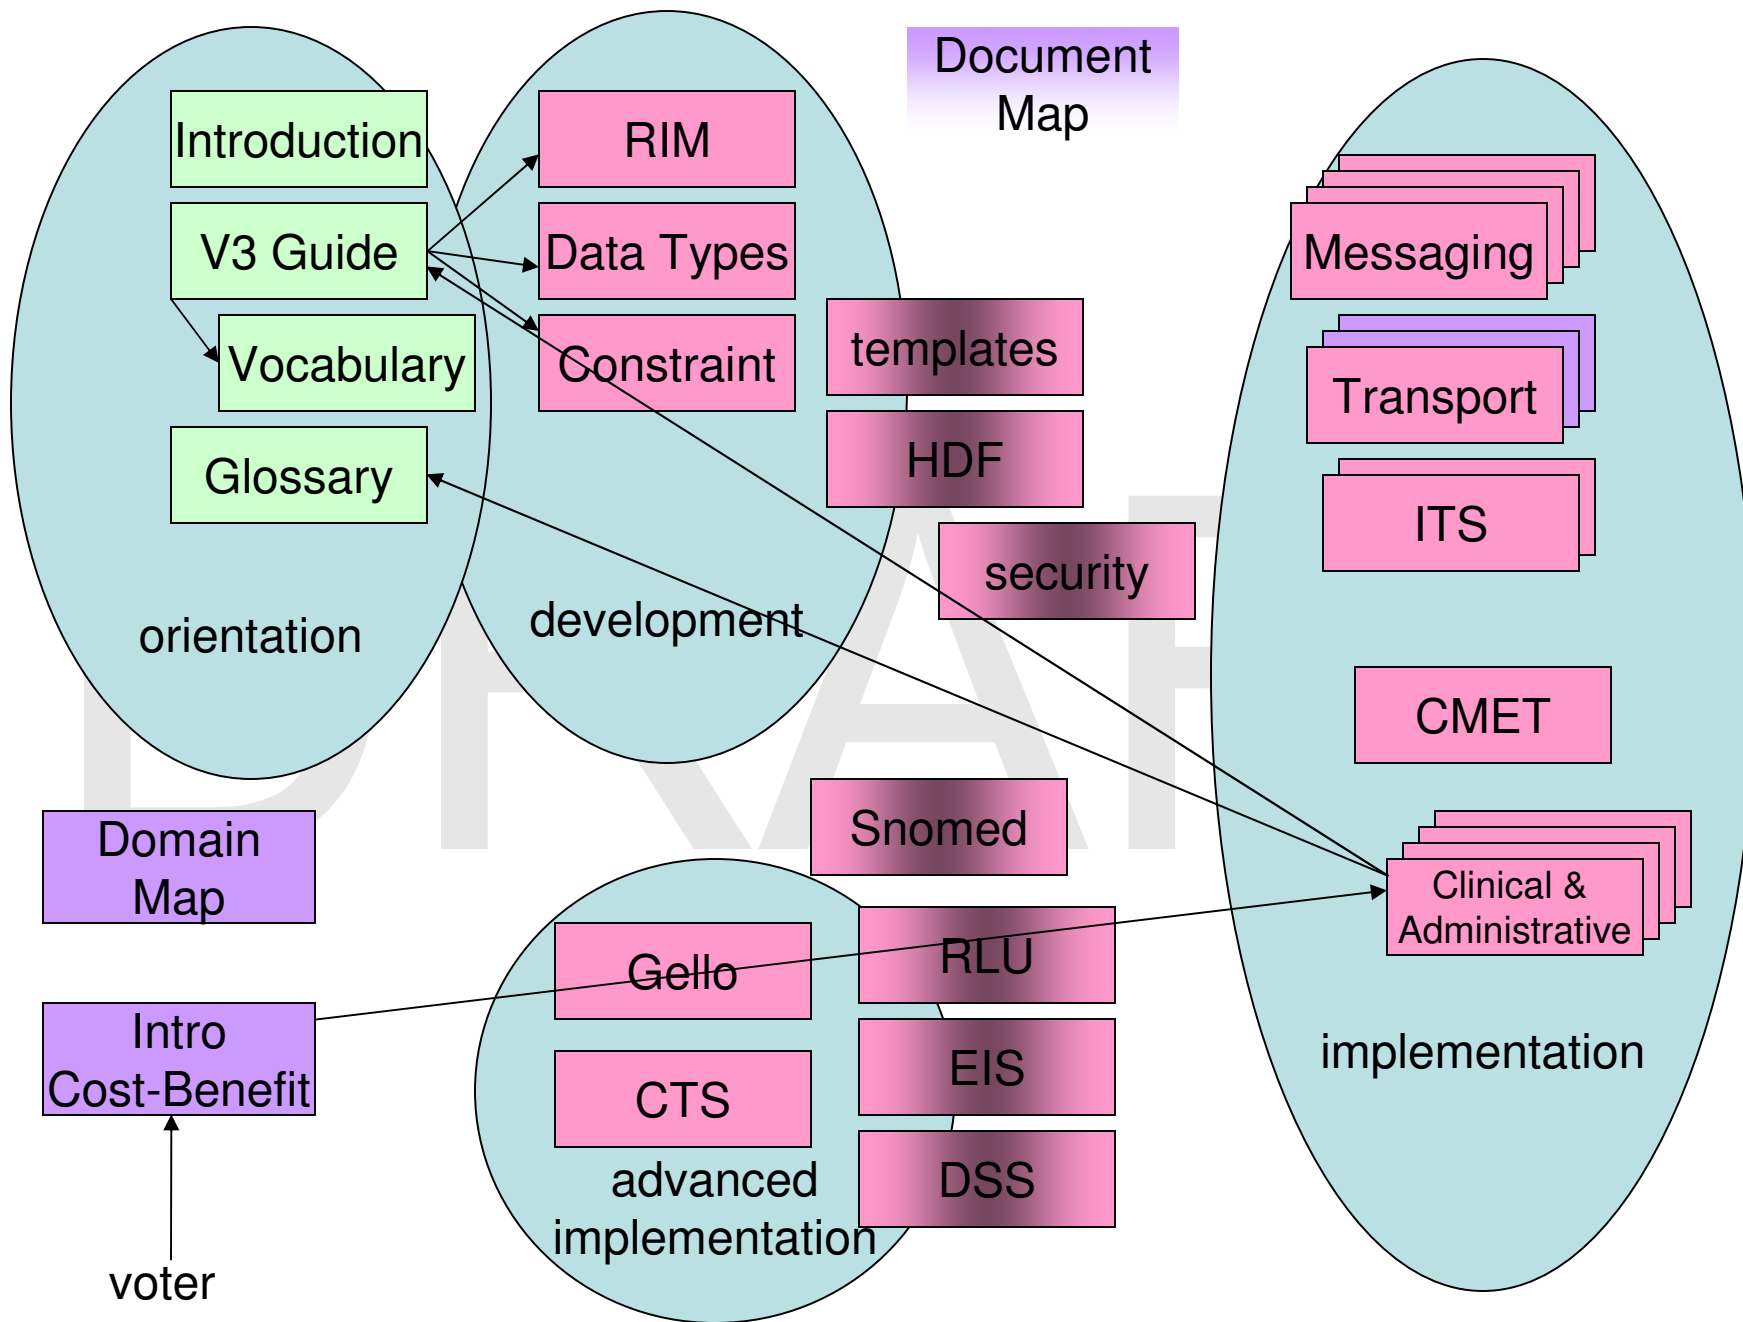

Document Map Concept 1

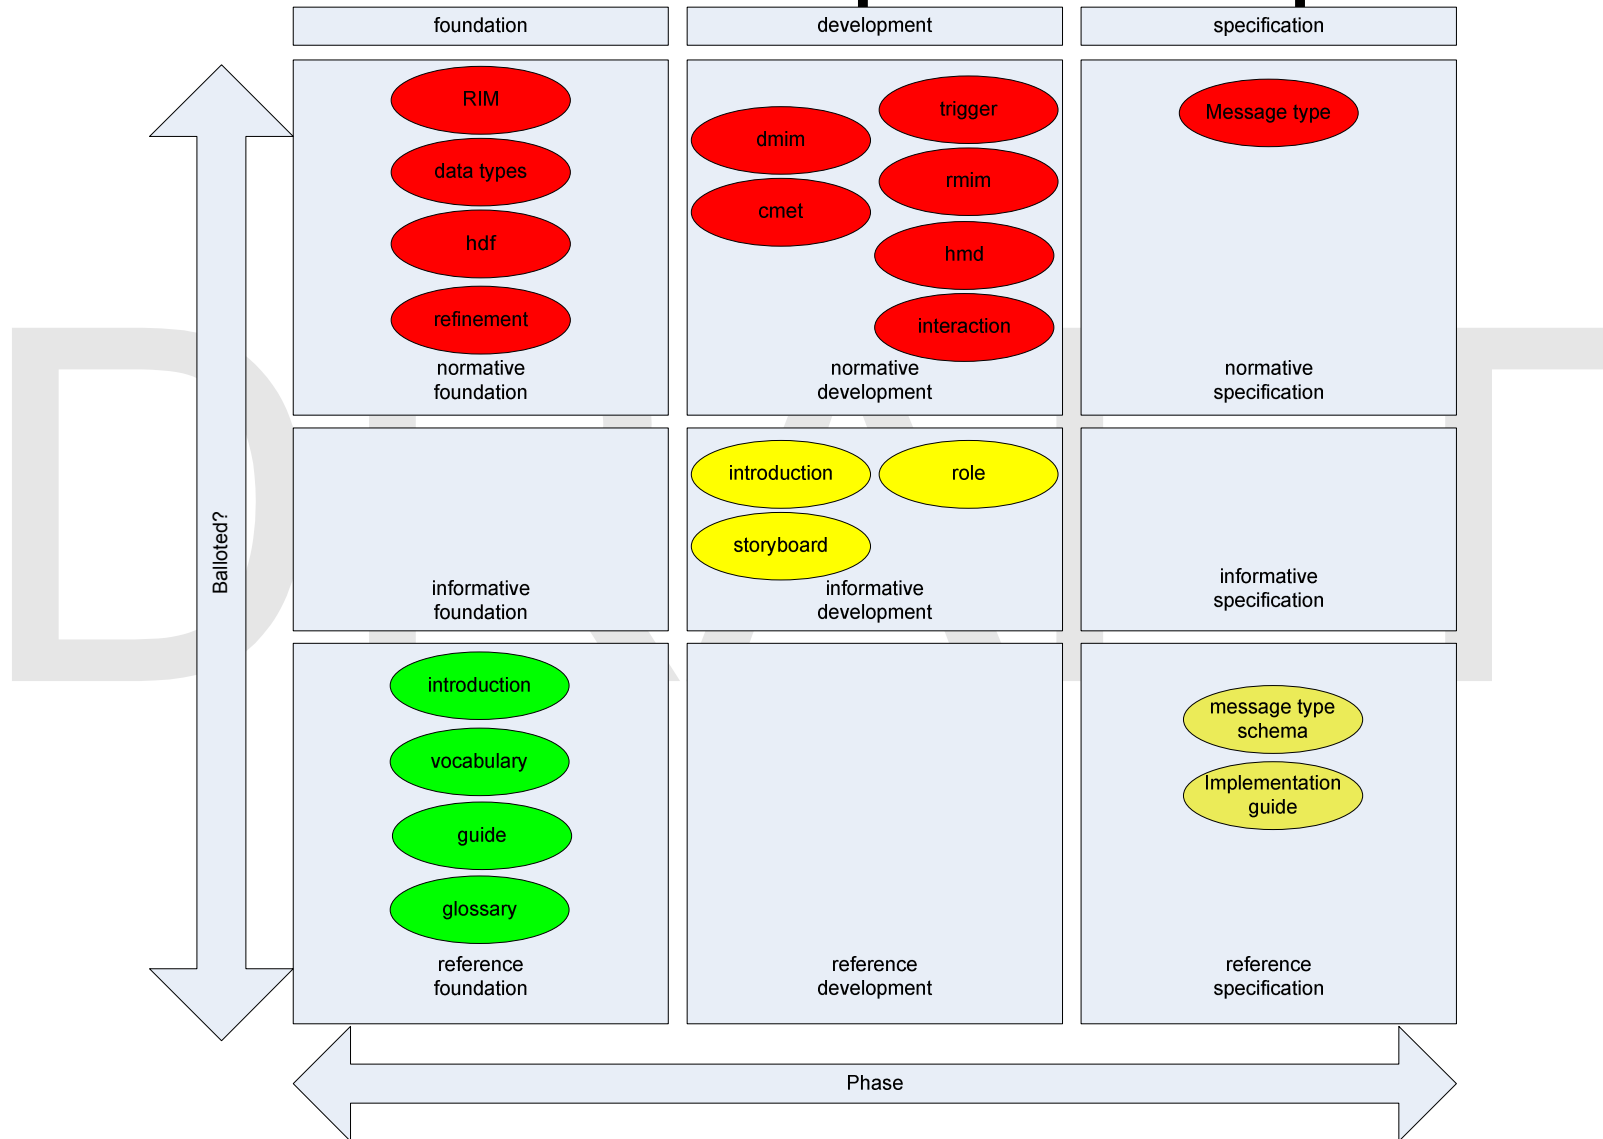

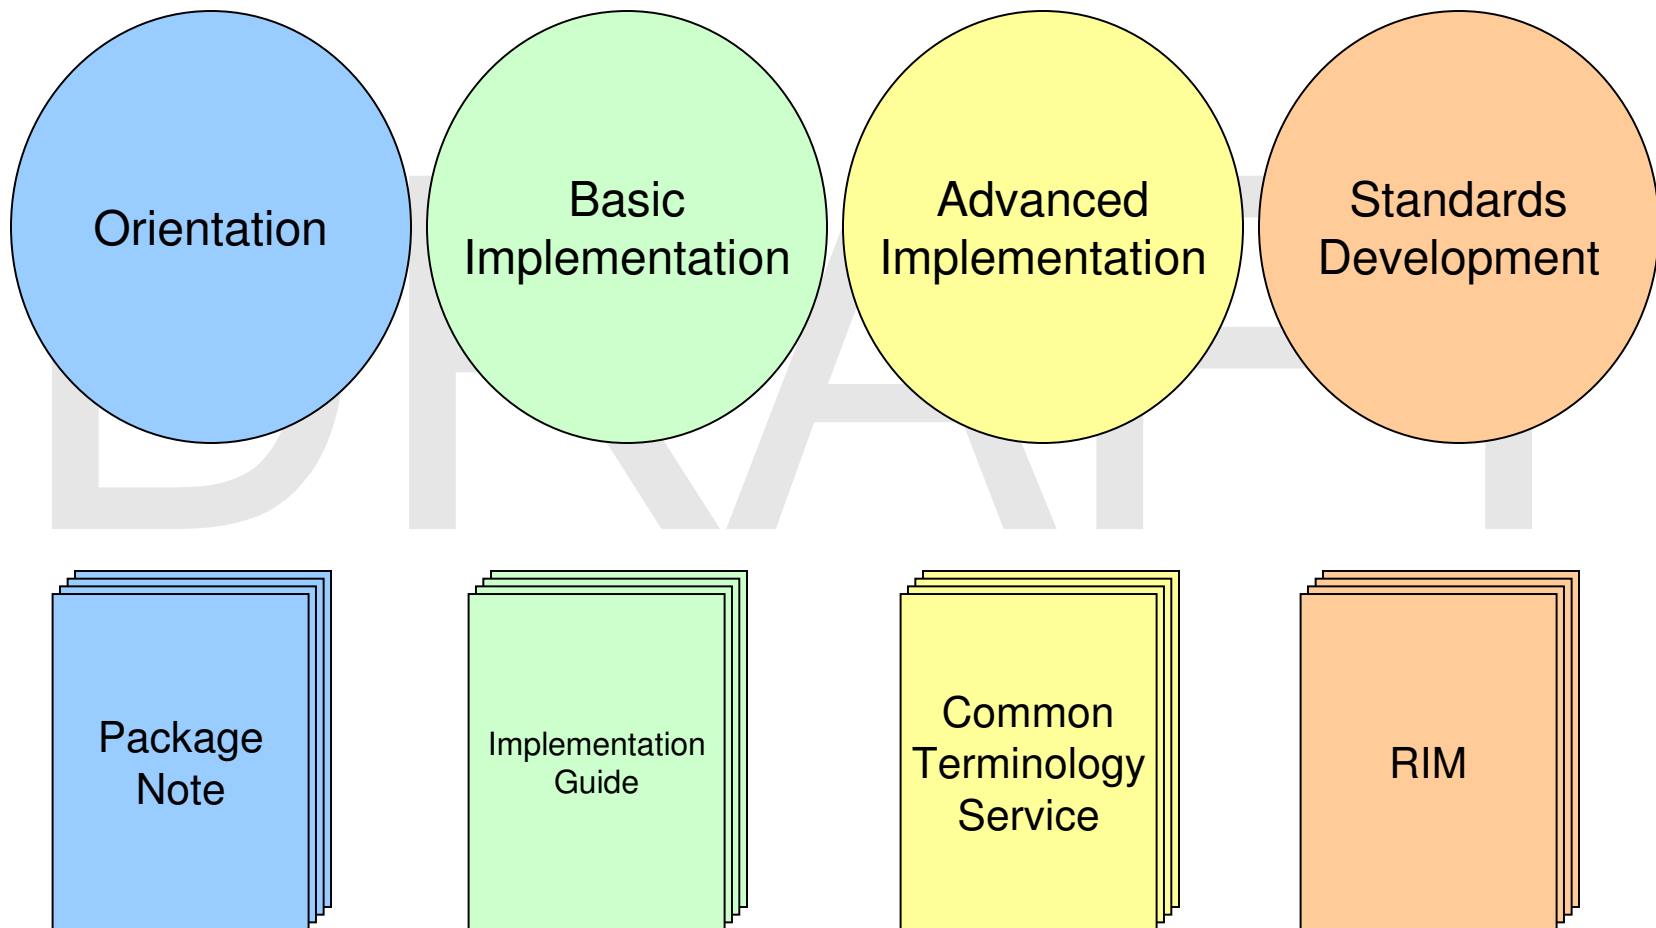

Document Map Concept 2

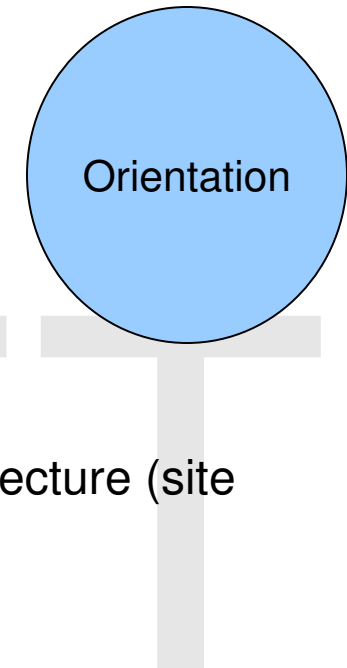

Document Map Concept 3

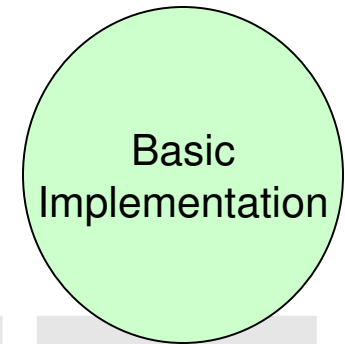

Orientation Documents

- V3 Cost-Benefit
 - Not yet written
 - A business view for evaluators
- Document Map
 - This presentation is a draft of the document map
 - How to navigate, per user type or objective
 - May evolve in tandem with a physical information architecture (site map)
- Domain Map
 - Not yet written
 - Semantic touch points, overlaps, and gaps
- Introduction
 - Orientation for the reader of a specific ballot package or normative edition, a.k.a. “Package note to readers”
- Glossary

Basic Implementation Documents

- Implementation Guide
 - Some exist, some do not
- Domain specification
 - Schema
 - [domain introduction document?]
- Implementation Technology Specification
- Messaging
- Transport
- Security

Advanced Implementation Documents

- Common Terminology Services
- GELLO
- SNOMED
- RLU
- EIS
- DSS
- CDA

DRAFT

Standards Development Documents

- HDF
- Artifact Guide
 - Previously “V3 Guide.”
 - Draft in progress to move specific information to documents for specific artifacts or to HDF
- RIM
- Vocabulary
- Data Types
- Constraints
- CMET
- Templates
